Light for Façades and Architecture

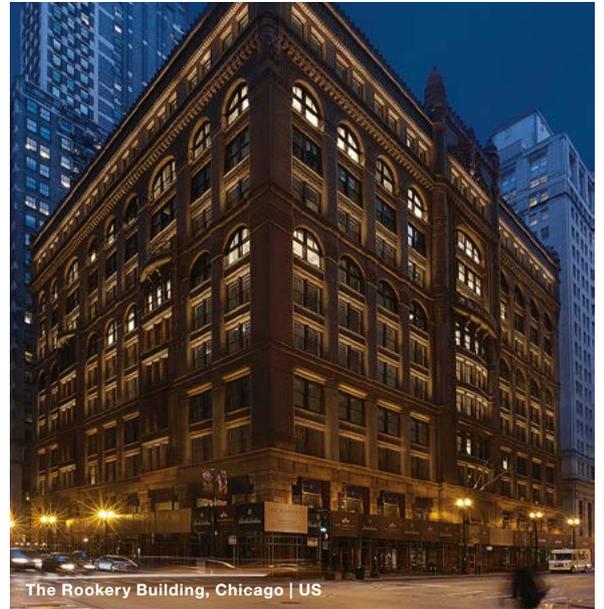

People find the nightscapes around them created by illuminated building façades. These façades facilitate orientation, convey messages, communicate emotions and create attention. Contemporary lighting solutions for building façades need to create added value for local authorities or have architectural or economic merit by making a location more beautiful and safer, showing a building off in the right light or getting a positive corporate image across. Achieving this demands great aesthetic design sensibility. Nowadays, however, lighting solutions also need to be sustainable, save resources and prevent unnecessary light pollution. Zumtobel is able to reconcile all these factors – with a range of luminaires that are specially adapted to cope with demanding lighting tasks. Zumtobel lighting solutions shape a building's architecture and accentuate details in a multifaceted manner by directing light very precisely. These luminaires also cut energy consumption thanks to the use of efficient high-power LEDs. This enables Zumtobel to strike a balance between cultural aspirations and the need to use resources responsibly. Intelligent lighting control systems supplement lighting, turning it into a complete solution that meets any requirements – from discreetly illuminated memorials through to façades that carry media messages.

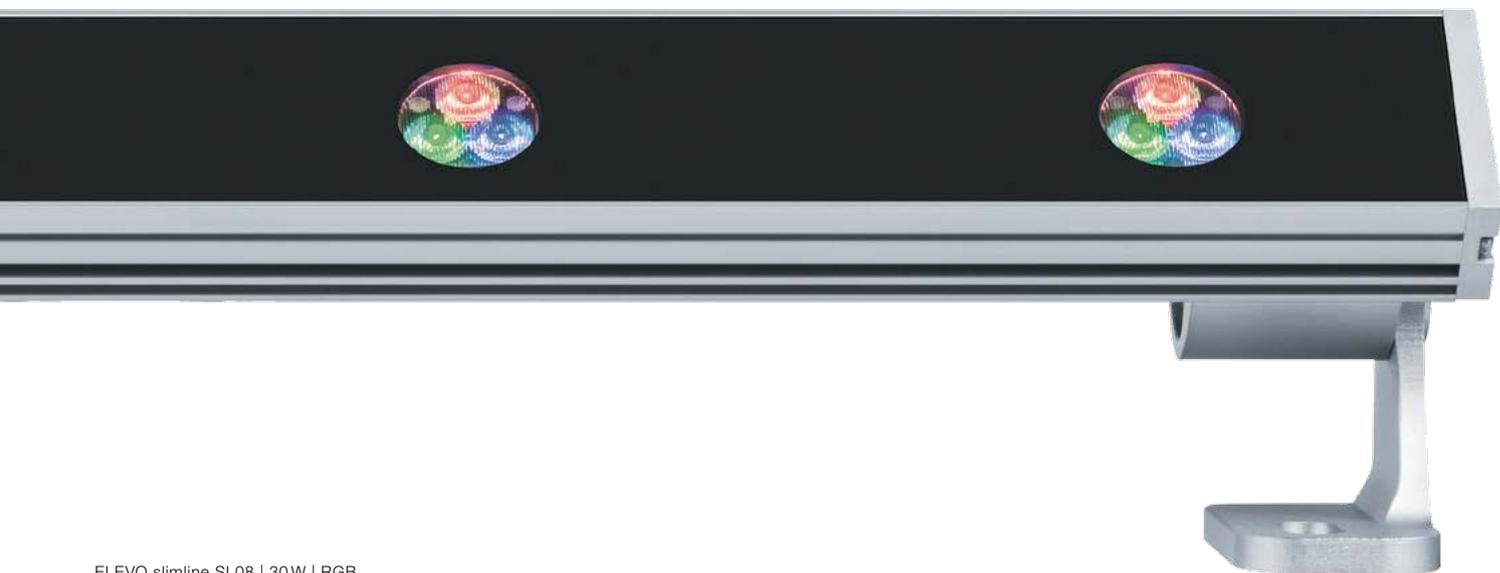

Zumtobel. The Light.

Sustainable Lighting

Sustainable lighting is underpinned by modern LED technologies and control systems

IKONO-D S LED | 3x2 W | Cool white | Flood

APHRODITE LED RBA/W | 40W

Exploiting the benefits of LEDs With modern façade lighting, taking sustainability into account is a matter of course at every stage. While we strive for the best possible energy efficiency, the lighting effect must impress the onlooker. Zumtobel reconciles these two aspects by using the latest state-of-the-art LED luminaires as a matter of priority.

- With up to 135 lm/W, LED luminaires are even more efficient than discharge lamps.
- A service life of 50 000 hours or more means that, assuming a burning time of 10 hours a day, luminaires remain maintenance free for up to 14 years.
- A combination of compact size and special optical systems enables lighting effects that are entirely novel considering the wattages used.
- Besides the classic method of illuminating a building in white light, façades can also be set centre-stage by using dynamic colour sequences, and buildings can also convey messages.
- LEDs have another huge advantage over conventional discharge lamps: LEDs emit light instantly. Zumtobel exploits this fact, in combination with digital control systems, to boost energy efficiency and optimise dynamic lighting installations.

DMX ballast box IP56 | 100 W | DC 24 V

PYLAS L LED RGB | 7 x 2 W | DMX | Flood

Ideal façade lighting In the past, wattages of 35 W to 400 W per lighting point were not unusual in the case of HIT floodlights, but many of the luminaire product ranges featured in this brochure operate at maximum wattages of only 25 W. The PYLAS S, PAN and LEDOS III spotlight ranges get by with just 1 W, and PYLAS M and IKONO S luminaires need no more than 10 W. Even our PYLAS XL flagship spotlights operate on 52.5 W, well below previous figures.

Positioning the luminaires right in the physical structure makes the lighting effect significantly better than with banks of high-wattage floodlights that are mounted with greater clearances: such floodlights can only stage a façade relatively inaccurately and are unsightly in the daytime.

The PYLAS S, PAN and LEDOS III spotlight ranges make do with just 1 W. ELEVO P2, PYLAS M and IKONO S need no more than 10 W.

Control is a crucial planning detail for any façade lighting: no two days are alike, the effect of light varies depending on the time of year, and a building or the area immediately adjacent to it is often laid out for various activities. Appropriately adaptive lighting creates added value.

Thanks to Pulse Width Modulation, Zumtobel's LED façade luminaires can often be driven by bus signals produced by any familiar lighting technology:

- SwitchDIM or sequencers are the simplest solution for individual luminaires and small sets of luminaires
- DALI control can also be coordinated with the interior lighting: dimming and limited dynamic colours on up to 2x64 channels
- DMX control for extensive colour-changing control of a relatively large set of RGB luminaires

Product Design

A clear focus on application

PYLAS XL LED | 21 x 2.25 W | Cool white | Flood

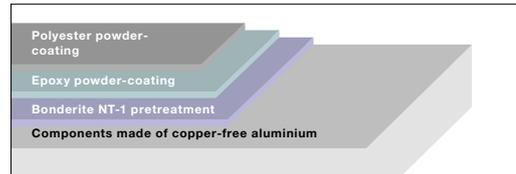

An example of quick installation: the SKENA luminaire head is fitted to a wall plate with a built-in power pack. Through-wiring is also possible.

An example of simple addressing: PYLAS L RGB, PYLAS XL RGB and IKONO M RGB solve the problem by using easily accessible rotary switches.

Excellent quality standard thanks to 3 protective layers.

Zumtobel façade luminaires are built with the individual aspirations of chief architects in mind, as well as lighting designers' preferences, the requirements of installers and the long-term needs of operators.

Application-oriented versatility

Façade luminaires have the task of illuminating different building shells – while blending unobtrusively into the background and becoming part of the façade. Zumtobel's product portfolio offers abundant ways of achieving this: recessed and surface-mounted luminaires that are used singly or in groups, depending on the particular task in hand. The surface-mounted luminaires have strictly geometrical shapes, while the recessed luminaires are invisible in the façade.

Easy installation and addressing

Because luminaires on a façade are often difficult to access, many product features are intended to simplify installation and avoid addressing errors. The time this saves reduces the cost of a project.

Long service life

With luminaires that, because of lighting technology and switching times, often have to operate for 20 years or more without needing maintenance, the durability of luminaire housings and mounting parts is absolutely crucial. What is more, many buildings are located in harsh environments, for instance buildings close to the sea which are exposed to salt-laden sea air. All Zumtobel façade luminaires are marine grade luminaires with heavy-duty protection and are therefore extremely durable.

- Luminaire housing and mounting parts are made of highest-grade, low-copper aluminium alloy.
- After environmentally-compatible cleaning by nano particles using bonderite technology, housings are given a dual-layer powder coating: first an epoxy layer, then a polyester layer is applied and stoved. This make sure that the powder-coated components are protected against moisture and mechanical impact as well as against UV radiation.
- Mounting parts, screw fittings and mechanical connectors are made of highest-grade V4A special steel.

PYLAS

LED spotlight luminaire

PYLAS S LED

PYLAS M LED

PYLAS L LED

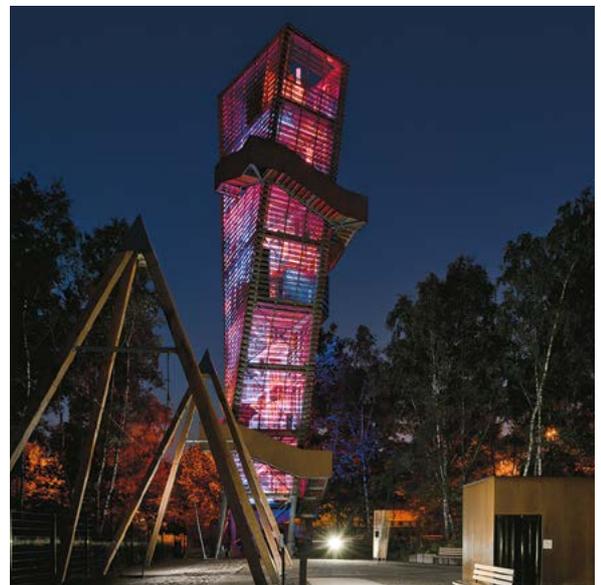

PYLAS XL LED

Extensive product range

The luminaire design features the same product family concept in all four sizes. This makes it possible to use PYLAS to illuminate details or surfaces while retaining the same design language. The clean, geometric lines of the stretched luminaire housing are relatively inconspicuous and blend into the façade. Rugged materials and dual-layer powder coating make these luminaires extremely robust and durable. As a marine grade luminaire with IP65/IP66 protection, it can even cope with the challenging environmental conditions encountered in coastal areas. White light PYLAS LED floodlights have excellent thermal and mechanical protection: their power units (230 V) are built into the luminaire housing.

PYLAS RGB in four sizes PYLAS uses state-of-the-art LED technology to create interesting colour-changing centre-stage settings like those seen in the “Turm der Lüfte” in Bremen. All four sizes of the colour-changing LED spotlights have a consistent design and use DMX 512 signals which are standard for RGB façade lighting. The DALI technology used in the interior can also be adapted as a custom solution for smaller projects.

In the PYLAS sizes L and XL, all power units (230V) are fitted ready for direct electrical contact, as are rotary switches for correct DMX addressing. Due to their miniaturised dimensions, PYLAS sizes S and M are 24V DC luminaires. They can be connected through PWM (Pulse Width Modulation) signals to a separate IP56 DMX supply box which is available as an accessory. The luminaires can also be controlled individually via three-channel PWM power units (24V) using sequencers, 1–10V or DALI signals. Using well-known market standards allows a high degree of flexibility in an extremely wide variety of projects.

PYLAS S LED RGB

PYLAS M LED RGB

PYLAS L LED RGB

PYLAS XL LED RGB

Narrow-beam or wide-angle: extremely efficient lenses add the perfect finishing touch to high-precision lighting technology with system luminous flux levels in excess of 60 lm/W.

The luminaire head is positioned securely by an adjustable graduated swivel joint and two hexagon socket screws.

Tight-fitting glass panes flush-mounted in the frame prevent trapped rainwater from causing dirt marks, thereby reducing illuminance. The luminaire is almost self-cleaning.

A hinge allows the glass cover to be folded down if maintenance or cleaning is required. Convenient single-handed installation from a ladder or an aerial platform makes maintenance easy and safe.

PYLAS

Size S

PYLAS S LED | 1.2W | Cool white | Flood

PYLAS S

The compact dimensions of LEDs pave the way for miniaturising luminaires, especially those used for accent lighting. This is a particularly attractive aspect, especially for façade lighting. Used alone or in conjunction with LEDOS III and PAN, PYLAS S allows entirely new approaches to lighting design using luminaires that consume just 1.2 W.

All PYLAS S luminaires are fitted with a 500 mm lead and an IP67 cramping connector to ensure easy electrical contact. The white-light floodlights have a built-in mains transformer. RGB luminaires need a DMX ballast box (accessory) to relay DMX signals, but can also be driven by 1–10 V or DALI signals.

Anti-glare shield for perfect glare control in conformity with Dark Sky specifications

PYLAS

Size M

PYLAS M LED | 4x2.25W | Cool white | Flood

PYLAS M

Accentuates and illuminates projecting features, objects, smaller columns or other details on façades: in situations where 50 or 75 W halogen spotlights were previously used, nowadays it is possible to use 10 W lighting points very efficiently; in addition, they have a service life that is roughly 25 times longer. The mains transformer is already fitted in the white light floodlights.

PYLAS M RGB consumes no more than 8 W to produce dynamic colour sequences. Relaying DMX signals requires a DMX ballast box (accessory), but the RGB floodlights can also be driven by 1–10 V or DALI signals.

IP56 DMX ballast box For power supply, electric feed and relaying the DMX signal: on the secondary side of the ballast box for RGB luminaires, there are four cable glands for connecting four luminaires or sets of luminaires that are interconnected via distribution boxes. Therefore, all connected 24 V DC luminaires have the same address, which ensures synchronous sequencing. The DMX supply box is wall mounted in the vicinity of the luminaire (up to 50 m away). One unit can be connected to up to 20 PYLAS S RGB or 8 PYLAS M RGB spotlights. Pre-programmed standard colour sequences can be generated using appropriate DIP switch settings in the DMX supply box.

PYLAS M

Power consumption

4 x 2.25 W LED white

PYLAS

Size L

PYLAS L LED | 7x2.25W | Cool white | Superspot

PYLAS L

100 W halogen spotlights or 20 or 35 W HIT spotlights were previously used to illuminate vertical surfaces, columns and balconies on façades. With a power draw of just 17.5 W, PYLAS L offers similar lighting levels, plus high efficiency and a service life of 50 000 hours. As a colour-changing LED floodlight, it still only draws 14 W max.

Both types are completely self-contained and can be connected directly to the mains supply and bus supply. The models that produce white light include a mains transformer and a terminal block for through-wiring. The RGB luminaire housing contains a DMX converter and rotary switches used for addressing.

PYLAS L

Anti-glare shield for perfect glare control in conformity with Dark Sky specifications

PYLAS

Size XL

PYLAS XL LED | 21 x 2.25 W | Cool white | Flood

PYLAS XL

The largest unit in this product range is designed to illuminate correspondingly large vertical surfaces, tall columns and façade features. With a power consumption of just over 50 W and a service life of 50 000 hours, PYLAS XL is a great alternative to the 70 W HIT spotlights that were usually used for this purpose. Floodlights with white LEDs have a built-in power converter and a terminal block for through-wiring.

The colour-changing PYLAS XL with RGB gets by with just 25 W. A DMX converter and rotary switches used for addressing are already fitted. Both the white and colour-changing PYLAS XL floodlights are therefore completely self-contained and can be connected directly to the mains supply and bus supply.

PYLAS XL

Power consumption

21 x 2.25 W LED white

IKONO

Wall-mounted LED luminaire

Zumtobel GmbH, Lemgo | DE

Lighting solution: IKONO-I/D S RGB wall-mounted LED luminaire

IKONO-D S LED | 3x2W | Cool white | Spot

Light patterns and colour effects

Wall-mounted luminaires that deliver directional light, fulfil functional lighting tasks and are also used as design elements. IKONO luminaires provide direct and indirect/direct illumination that can stretch or accentuate a façade, giving it an intriguing appearance in the dark.

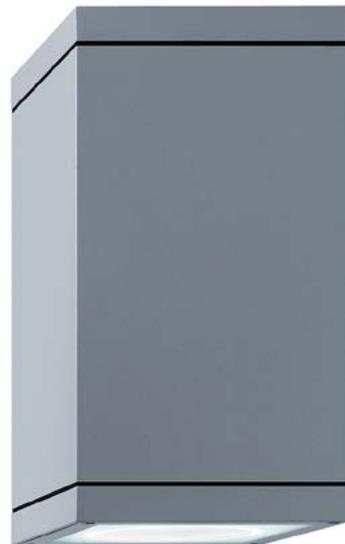

Previously, these luminaires, especially when used in smaller sizes, were fitted with not very energy-efficient halogen lamps. Now, every IKONO size exploits the benefits of LEDs – with warm white or cool white, narrow-beam or wide-angle cones of light. The smaller and medium-sized IKONO S RGB and IKONO M RGB harness the emotive effects of colour-changing light. They are primarily used in entrance areas of event locations, restaurants and catering facilities, or in passageways. These luminaires are used to lend structure to buildings and break up the different sections of a building to great effect. They are controlled by DMX signals or by project-specific, customer-provided bus signals.

IKONO-D M LED RGB | 15 W | Flood

IKONO-D L LED | 25 W | Cool white | Flood

DMX ballast box with terminals and DMX controller

Time-saving quick-disconnect connector: mounting plate with plug/socket system for internal voltage and bus supply between wall plate and luminaire housing

Built-in mains transformer and DMX addressing for IKONO M RGB with wide-angle light distribution

Lighting head can swivel in luminaire housing: cones of light can be accurately adjusted on the wall

Impressive illuminance levels thanks to leading LED technology: IKONO S draws just 6 W

Multichip LEDs for sizes M and L: just 15 W and 25 W are sufficient for the high illuminance levels and precise light guidance that have been perfected by Zumtobel with specially developed sputter-coated plastic reflectors that ensure high light output ratios.

Flush-fitted glass diffusers with no raised luminaire frame prevent dirt accumulation and the reduced light that this causes. The luminaire is almost self-cleaning.

Striking geometry

Wall-mounted special effects luminaires are a fascinating tool for painting walls and façades with light and making them look stunningly different. In the past, it was mainly high-wattage halogen and discharge lamps that were used to achieve this, but SKENA now uses advanced LED technology: used in combination with optimised optical systems, it needs just 10 W to produce impressive results. Thanks to three different luminaire types with different numbers of light windows and different light distributions, the creative design possibilities are almost boundless. These LED cubes can be positioned on a façade in various ways. Single luminaires or small groups can be used as eye-catchers. A larger number of luminaires can be positioned geometrically for more expansive configurations that have a correspondingly greater long-distance effect; the luminaires can also be rotated in 45° increments. In particular, this is a way of giving surfaces that appear somewhat monotonous in the day a fascinating night-time look without breaking the bank.

SKENA lighting cone

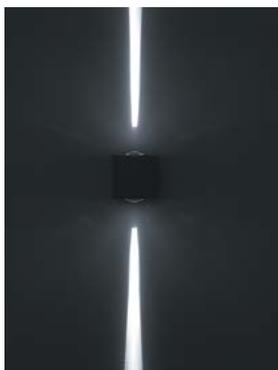

SKENA LED | 10W | Cool white
 Quadruple superspot

SKENA 1

Narrow-beam uplight and downlight

Elegant grazing light in two directions divides up vertical surfaces to great effect, lending them extravagant appeal and new shine.

SKENA 2

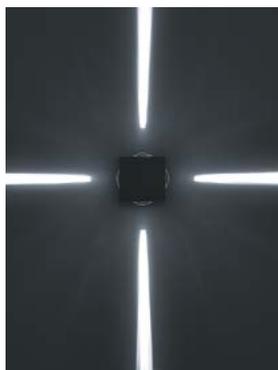

Narrow-beam uplight, wide-angle downlight

SKENA uses two different cones of light to combine a wallwashing effect with wall outlining over a defined length.

SKENA 3

Narrow-beam in all four directions

Narrow-beam cones of light from all four sides of the cube paint star-shaped effects on the wall.

The SKENA luminaire head is attached to the wall plate with a built-in power pack and allows the possibility of through-wiring.

The optical system comprises a conical, highly specular reflector and an LED board that emits an indirect light beam and narrow-beam or wide-angle glass lenses.

APHRODITE

Unique, emotionally charged lighting scenes: this LED spotlight features randomly variable light, colour and action.

zumtobel.com/aphrodite

The ZUMTOBEL logo is located on the bottom right of the image, on the white surface of the spotlight's housing. It consists of a small square icon followed by the brand name in all caps.

▶ APHRODITE on youtube.com

“Light reflected on the sea, on glass and in sunlit water have always fascinated me. For me, the APHRODITE spotlight embodies precisely this diversity which only light is capable of conveying: moving light creates a sense of well-being, invites contemplation and encourages communication and creativity. Everyone is familiar with the fascinating images that we imagine in the flickering light of a fire. Atmospheric images spring to life naturally as if of their own accord – APHRODITE does the same thing. This LED spotlight unites all the qualities of the emotive effects of light and enhances them with a unique balance of sensuality and rationality. Through intensive cooperation with Zumtobel and cutting-edge LED technology, we have managed to turn this philosophy into reality.”

Interior designer BDIA
biorhythm Design Studio, Berlin

APHRODITE

Special-effects LED spotlight

ArtDesign, Feldkirch | AT

Lighting solution: APHRODITE 40 W

APHRODITE LED RBA/W | 40W | Ceiling mounted

Functional, emotive special-effect lighting

The APHRODITE LED spotlight combines light, colour and movement in a fascinating manner that makes it possible to set façades and rooms centre-stage in an impressive way. Based on the lighting spectacles found in nature, a unique lighting concept has been developed that is characterised by highly emotive lighting scenes. This is made possible by continuously flowing, ever-changing light projected by a system incorporating a special LED module and a rotating glass cylinder (patent pending).

Objective, emotive or passionate? APHRODITE produces the required ambience. A choice of seven pre-defined lighting scenes with three speeds and various dimming levels is available. They create richly varied lighting scenarios from functional white light in various colour temperatures, combined with coloured light from red, blue and amber LEDs.

It is very easy to operate the spotlight: individual lighting scenes, and the projection direction and speed can be set manually via momentary-action switches on the spotlight or by remote control via DMX protocol. The luminaire comes ready to connect and is fitted with an earthing pin plug.

Thanks to IP65 protection and the use of materials that are highly resistant to chlorine, APHRODITE is also an eye-catcher in wellness areas or swimming pools, inviting people to relax. APHRODITE is also extremely flexible when it comes to installation: its mounting bracket ensures secure fixing to walls, ceilings and floors.

APHRODITE

Power consumption
40 W LED RBA/W

Colour temperature
White tones: 3000K, 4200K, 6500K
Colours: red, amber, blue

LED service life
35000 hrs. at up to 70% luminous flux

Protection type/protection class
IP65, protection class III

Housing made of die-cast aluminium with high-grade matt white powder coating (RAL 9016); IP65 protection, excellent protection against corrosion and use of materials that are highly resistant to chlorine make this luminaire suitable for use in wellness areas and swimming pools.

DMX control via XLR 5 connector

Manual operation via push-button; left-hand momentary-action switch for speed setting and reduced illuminance; right-hand momentary-action switch for setting one of seven pre-defined lighting scenes and increased illuminance.

An in-house developed LED module and the specially designed, motor-driven glass cylinder produce refracted light that is projected in constantly changing, fascinating light patterns.

An effective ribbed structure ensures a well-balanced cooling system and adds a final flourish to the design.

PAN

Concealed in the façade: this accent-lighting recessed LED luminaire makes a completely new idea for individual building stage settings come to life.

zumtobel.com/pan

PAN

Recessed LED luminaire

Emporio, Hamburg | DE

Lighting solution: PAN Recessed LED luminaire

The miniaturised alternative to conventional floodlights

With its extremely compact size and low power consumption, PAN has perfected centre-stage settings that are as individual and energy-saving as possible. Precise light distribution sets PAN apart from bulky floodlights that throw light across large areas of façades and often look out of place in the daytime.

Product development focused on illuminating windows, parapets and alcoves: PAN is a recessed luminaire that blends seamlessly into the façade structure; an equally discreet surface-mounted housing is available as an accessory. With three different beam patterns, the miniaturised LED luminaire caters for specific lighting needs: window reveals are precisely lit with an ellipsoidal lens, and a specially developed anti-glare device eliminates any trace of glare. Façade details are selectively illuminated by rotationally symmetrical spot and flood optics.

PAN LED luminaires fitted in window reveals consume less energy at night than a small domestic appliance, as demonstrated beautifully by the Hotel Emporio.

ELEVO

LED spotlight / wallwasher

The Rookery Building, Chicago | US

Architects: Burnham & Root, Chicago | US

Lighting design: Office for Visual Interaction, Inc. (OVI), New York | US

Lighting solution: ELEVO LED spotlight

ELEVO P1 | 4 W | RGB

ELEVO P2 | 7 W | RGB | Elliptic

ELEVO P4 | 15 W | Warm white | Elliptic

Accents for near and far

Precise and flexible: the flat LED spotlight is less than 3.5 cm high but handles an extremely wide range of lighting tasks brilliantly. It emphasises façade elements, relief slabs and projecting features, backlights surfaces uniformly and sets tall columns and portals centre stage with equally striking effectiveness. A linear wallwasher that is available in lengths of 400 mm, 800 mm and 1200 mm, the compact, low-profile ELEVO line LED light line is perfectly suited for illuminating large façades and surfaces.

ELEVO combines various light distribution patterns with the option of selecting either warm white or cool white light. In this way, both historic redbrick façades and contemporary metal façades can be illuminated authentically or set centre stage using coloured and dynamic lighting in order to catch people's attention.

The flat, compact design of the ELEVO LED spotlight turns it into an inconspicuous integral part of the façade that is invisible to passers-by. Intelligent thermal management protects it against overheating and enables to use ELEVO even at high ambient temperatures due to the luminaire's automatic dimming function.

The monochrome luminaire can be switched, or dimmed via a separate PWM control line, thereby reducing energy consumption by reducing the lighting level at night, for instance. The RGB luminaire, however, is controlled via the fast, dynamic DMX protocol, setting the façade centre stage by means of colours and dynamism.

Freely adjustable fixing brackets of two different heights attach the LED luminaire to floors, ceilings or walls as required.

The IP65-protected connector kit provides 24 V power supply and transmits dimming signals.

LEDOS III

This small all-round luminaire combines huge versatility with great efficiency when recessed into the wall, ceiling or floor.

zumtobel.com/ledos_III

LEDOS III

Recessed LED luminaire

LEDOS III S D 30mm
LED 1 x 0.6W | Scale 1:1

Miniaturisation meets variety and efficiency

LEDOS has already become a classic in the market for LED luminaires which is still relatively young, and the third-generation luminaires are even smaller and more efficient. The product range includes highly versatile recessed luminaires for walls, floors and ceilings. LEDOS guides people towards a building, discreetly lights entrance areas and archways, accentuates façade elements and draws attention to danger areas such as steps and projections.

LEDOS III S With a diameter of just 30 mm, LEDOS III S provides decorative architectural accent lighting and improves orientation and guidance. Round and square models, each with a choice of flat or domed lenses, are available. When used as orientation luminaires, the domed lenses have the great advantage of being visible from afar also when viewed at shallow angles. The fully matt, opal surfaces of these luminaires ensure glare-free, uniform illumination and have an excellent long-distance effect. All LEDOS III S luminaires are available in dimmable versions that use Pulse Width Modulation (24V), and with power supply units that are available as an accessory, using bus signals for DALI, 1–10V and sequencers.

LEDOS III M Fitted with powerful power LEDs, the small 45 mm LEDOS III M is highly flexible when used as a wall-mounted, floor-recessed or ceiling-recessed luminaire for façade lighting. Both shapes, round or square, use appropriate beam patterns to perform different lighting tasks: narrow-beam lenses create lighting accents with cones of light that are up to 3 m long. Wide-angle optics direct attention to surfaces and objects. Asymmetric lens technology is used to illuminate stairs, entrance areas and passageways safely.

Special steel springs: this accessory is used to fix LED luminaires quickly and securely, for example in wooden floors (5 to 20 mm thick).

The luminaire housing has a permanently moulded-on 2 mm thick special-steel trim, thus making the ingress of any moisture through the top of the housing impossible.

LEDOS III

Individual solutions for every façade

LEDOS III has an asymmetric beam pattern in order to illuminate stairs vertically

Extremely wide variety of lighting tasks

Stair lighting LEDOS III's asymmetric fresnel lens accurately directs light onto steps and circulation areas. It takes care of orientation and safety. An unmistakable marking on the luminaire indicates the correct mounting direction, thus ensuring that the luminaire can be installed quickly without any risk of a mix-up.

LEDOS III installation LEDOS III's IP67 protection makes it ideal for use in façades or adjacent areas. This recessed luminaire has a shallow mounting depth and displays its strength regardless how it is installed: in cavity walls and ceilings, on raised floors with counter-battens or using a casting surround in any base.

LEDOS III M uses all the benefits of power LEDs but has been designed as a 24 V DC version. This allows simple parallel wiring, and a malfunctioning luminaire can be identified without the entire circuit failing. Built-in bridge rectifiers ensure polarity insensitivity, so that inadvertently reversing positive and negative polarity will have no effect on operating capability.

The uniqueness of LEDOS III S and LEDOS III M lies in their size and the use of an electrical cramping connector (patent pending).

LEDOS III M and LEDOS III L luminaires with cable assemblies are electrically connected via cable connectors: to do this, the cable ends are inserted and sealed in the terminals in the same way as with a cable gland. In the well-sealed recessed housing, there is sufficient space for the cable connector and feed line. Size S LEDOS III luminaires are fitted with a 3 m feed line which is connected directly to a junction box.

Installation in outdoor areas: a 20 cm thick soakaway underneath the flush-mounted housing drains off ground water. Connection to the supply voltage is obtained outside the casting surround in suitable junction boxes.

LEDOS III S**Domed, opal lens**

For orientation, corridor lighting and route guidance with enhanced long-distance effect.

**LEDOS III M****Asymmetric beam pattern**

Wide-angle recessed wall luminaire used to vertically illuminate the floor in case of paths and stairs.

**LEDOS III L****Flood 30° beam angle**

Wide-angle grazing light picks out the materiality of façades and walls and can produce brilliant lighting effects.

LEDOS III recessed LED luminaires are distinguished by an extensive choice of models that can handle a wide variety of lighting tasks:

LEDOS III S with wide-angle optics are used for safe orientation lighting in access areas, passageways and entrances.

LEDOS III M recessed into the ceiling, wall or floor luminaire with a wide-angle or narrow-beam pattern concentrates on highlighting vertical surfaces and setting columns and features of façades centre stage.

LEDOS III L with narrow-beam and wide-angle optics for accent lighting makes orientation easier, and 230V mains connection will extend the application areas of the LEDOS product range in future.

PASO II

This recessed floor LED luminaire hits all the right buttons when it comes to setting dramatic contemporary lighting scenes while remaining unobtrusive itself.

PASO II

Recessed floor LED luminaire

Façade lighting for an office building using PASO II recessed floor luminaires

PASO II D120 LED
3 x 1.2W | Warm white

Functional versatility

Because PASO II is extremely compact and as flush fitting as possible, it fits into any scenario. This recessed floor LED luminaire is a great solution, even for stylistically sensitive façades: from historic buildings through to contemporary metal structures.

Combined with, or as an alternative to, the PYLAS spotlight range, PASO II can set any façade centre stage individually without its physical presence impinging on the viewer's field of view. Its ability to be installed absolutely flush fitting and its reduced surface temperature of no more than 40 °C make the latest generation of LED luminaires highly attractive for illuminating façades from close-up or by integrating them into pedestrian paths and zones that are close to buildings.

PASO II LED

Square and round luminaires available in three sizes and two overall heights make the PASO II luminaire range absolutely perfect for any façade lighting project. That's not all: the versatility of this system means that designers have almost unlimited choice when it comes to creative design, lighting effects and the option of façade-related locations.

PASO II recessed floor luminaires all share certain common distinguishing quality characteristics: shallow mounting depths, excellent thermal management and a patented, reliable sealing system. Easy installation and wiring are other features which apply throughout the entire product range.

PASO II

Variety of models

PASO II D120 LED | 3 x 1.2 W
Frameless | Cool white

Scope for individual design preferences

PASO II luminaires are available in three different frame designs. This diversity makes this luminaire product line both a design feature and a problem solver. It also opens up attractive ways of adapting the luminaire to suit the architecture and its materiality or colour scheme in any application situation.

PASO II
Overlapping

Concealing problem areas Many floor surfaces can only be adapted to match the housing shape to a limited extent or with a lot of effort. In such cases, an overlapping cover frame hides problem areas around the casting surround – the frame has a low profile and there are no exposed screw heads.

PASO II
Flush fitting

Building without barriers Just a few millimetres are often enough to cause accidents or hinder free movement of wheelchair users. PASO II is available as a completely flush fitting model in all sizes, thus paving the way for recessed floor luminaires to illuminate circulation areas that are fit for the needs of the disabled.

PASO II
Frameless

Doing away with a metal frame The smallest size frameless version emphasises the harmonious overall architectural picture. This means that PASO II even goes well with the brass and gold leaf of historic façades. Four Torx screws secure the luminaire glass firmly so that it is burglar-proof.

PASO II D190 LED downlight
4x2.5W | Flush fitting
Warm white

PASO II as a downlight This recessed LED luminaire is also available as an IP65 downlight, with appropriate mounting accessories, in all sizes and shapes. In situations where, due to harsh environmental conditions, a high IP rating and extremely good resistance to corrosion are required, PASO II can therefore be used either as an uplight or downlight.

Just 100 mm high The extra low-profile PASO II, which is available in sizes 190 and 260, is only 100 mm high, including its casting surround. This does away with one of the most common obstacles to installing a luminaire in the location that is best from a technical lighting viewpoint. PASO II Low is fitted with all the requisite control gear, it is flush mounted or installed with an overlapping cover frame.

Besides efficient LED technology, PASO II luminaires are also available with the very latest compact fluorescent lamps, low-voltage halogen lamps or metal halide lamps in all three sizes (120 mm, 190 mm and 260 mm). The PASO II product line is rounded off by a large number of accessories for various mounting situations and application areas as well as anti-glare devices to prevent scattered light.

Orientation lighting close to ground level with LED

Wiesmann Auto+Sport, Dülmen | DE

Lighting solution partner: Elektro Hörbelt, Coesfeld-Lette
in collaboration with Elektro David, Dülmen | DE
Lighting solution: ORILED, 2LIGHT, TUBILUX

Maximum safety at minimum energy consumption

People need to be able to find their way intuitively at any time of day. This is especially true when it comes to finding one's way around public buildings. Light makes an important contribution to this and also improves safety. ORILED is the perfect alternative to conventional fluorescent lamps. A unique lens/reflector combination directs LED light onto the ground over a wide area. The luminaire's extremely uniform light distribution is ideal for specifically illuminating stairs, corridors, passageways and circulation areas. Here, LED technology is an efficient alternative to light sources with relatively higher wattages and luminous flux levels.

Its optionally flush-mounted or overlapping special steel frame is securely fixed by invisible Camlock fasteners. These recessed luminaires and bollard luminaires are available with IP 65 protection and are perfect for both indoor and outdoor use. Alternatively, ORILED is also available with separate battery packs for 1 or 3 hours of operation for use in emergency lighting systems.

HEDERA B LED

Calming white hues or striking colours: this linear LED wallwasher illuminates large surface areas uniformly.

zumtobel.com/hedera

HERERA B

LED wallwasher

Gaislachkogelbahn, Sölden | AT

Architecture: obermoser arch-omo zt gmbh, Innsbruck | AT

Lighting solution: HERERA media luminaire with DMX controller for façades

Impressive intensity with optional dynamic changes

With three different lengths and four secondary optics, HERERA caters for the individual needs of uniform façade lighting. HERERA RGB transforms a façade into a coloured works of art, whereas white high-power LEDs show off the façade's surface to full effect.

HERERA is a particularly rugged, UV-stable 230V luminaire that is made from aluminium and glass and requires no external control gear. As the system consists of luminaires with male and female connectors, installation is extremely easy. Built-in thermal protection automatically dims the luminaire in the event of excessively high temperatures in order to ensure that the LEDs' long service life is achieved.

Wiring options HERERA is available as a through-wired luminaire (IN/OUT) and as a luminaire with a built-in DMX terminating resistor for individual luminaires or luminaires at the end of a row (IN).

Temperature range

-20°C to +40°C (in operation)
-20°C to +60°C (switched off)

Accessories

Fixing set, female and male connector for IP66 connection

HEDERA LED RGB | 27 W | Length 600mm (24 LEDs)

HEDERA LED monochrome white | 40 W | Length 900mm (36 LEDs)

HEDERA LED RGB | 49 W | Length 1200mm (48 LEDs)

600 mm:

27 W, RGB, 888 lm
29 W, 6 000 K, 1910 lm
30 W, 3 000 K, 1470 lm
30 W, 4 000 K, 1680 lm

900 mm:

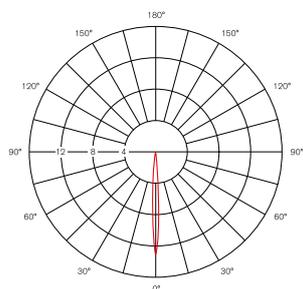

39 W, 6 000 K, 2870 lm
40 W, 3 000 K, 2210 lm
40 W, 4 000 K, 2520 lm

1 200 mm:

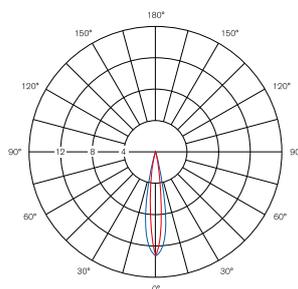

49 W, RGB, 1775 lm
47 W, 6 000 K, 3830 lm
49 W, 3 000 K, 2940 lm
49 W, 4 000 K, 3360 lm

HEDERA light distribution

Symmetrical light distribution 6°

Elliptical light distribution 10x20°

Elliptical light distribution (10x20°) guarantees the best possible colour mixing in case of RGB luminaires. Symmetrical light distributions with a beam angle of 6° or 29° meet the various requirements for direct through to indirect illumination.

Available as accessories:
mounting clip or support for
swivelling installation

HILIO

Versatility in design: HILIO monochrome provides subtle but striking structuring. HILIO RGB, on the other hand, relies on the effect of colour-changing lines.

zumtobel.com/hilio

HILIO

LED light line

Bauarena, Volketswil | CH

Architects: Nüesch & Partner Architekten, Volketswil | CH

Lighting solution: HILIO LED RGB light lines

Monochrome or multicoloured, calm or lively

Versatility in design is the slender HILIO's hallmark: the monochrome light line accurately follows the outlines of a façade, structures the architecture, or sets it centre stage by monochrome cove lighting in red, green, blue or white. The luminaires' multicoloured version exploits the power of colour and movement. The RGB version allows you to draw on a wealth of colours. DMX control of each individual luminaire brings life to façades. DMX control of each luminaire or each segment brings life to façades.

This flexibility is accompanied by extremely easy installation: HILIO is easy to connect thanks to a connecting cable and a connector system that comes with a higher protection rating as standard. Uniform pixel spacing and butt joining ensure a continuous, unbroken light line. The very tight LED binning (less than 3 MacAdams per luminaire) of the white, monochrome luminaires ensures a uniform look. Built-in thermal protection ensures safety by preventing excessively high temperatures.

HILIO LED

Light source

10 LEDs over a length of 300 mm, pixel spacing 30 mm

Power consumption

approx. 10 W per metre

Luminous flux of luminaire

275 lm (RGB, opal, length: 2 100 mm) to
777 lm (850, clear, length: 2 100 mm)

Colour temperature

3 000K, 4 000K, 5 600K: monochrome white
Red, green, blue: monochrome
RGB

Colour rendering

Ra > 80: monochrome white

LED service life

60 000 hrs. at up to 70 % luminous flux: monochrome
40 000 hrs. at up to 70 % luminous flux: RGB

Protection type/protection class

IP65

Temperature range

-20°C to +40°C (in operation)
-20°C to +70°C (switched off)

A built-in overheating protection will automatically dim down the luminaire if the ambient temperature gets too high.

Accessories

Connector set, DMX splitter, ASTO set

HILIO-CL | 14 W | Clear optic

HILIO-O | 14 W | Opal optic

Optics HILIO uses different optics to cater for various design requirements: the clear LED light line is used for cove lighting or indirect lighting. The opal HILIO creates visible lines.

Length, control and wiring options Based on a segment unit of 300 mm, HILIO is available in seven different lengths ranging from 300 mm to 2 100 mm. This LED line is therefore a very good match for the individual dimensions of a façade. Radial wiring which, unlike axial wiring, requires very little space, meets the requirement for a continuous, unbroken line and uniform pixel spacing. HILIO is available both as a through-wired luminaire (IO) and as a luminaire with a built-in terminating resistor for individual luminaires or luminaires at the end of a row (IN). The single-coloured HILIO monochrome is available in dimmable and switchable version, HILIO RGB as a DMX luminaire controlled throughout.

Connector set (IP65) for outdoor areas The connector set combines the 24 V signal and data signal in a single output for up to 12.6 m of HILIO (with a 4 m feed line). With the monochrome LED light line, it is possible to apply dimming signals via a separate PWM control line. RGB luminaires that are controlled by DMX or video signals are connected by a connector set that is available as an accessory.

HILIO ASTO set The HILIO ASTO set with the ASTO USB tool is required in order to address HILIO RGB DMX and HILIO RGB VC luminaires. This makes it possible to address the DMX or video address of each HILIO individually.

CAPIX

One pixel for boundless possibilities:
this LED media luminaire hugs a
façade like a second skin and inter-
acts with passers-by.

zumtobel.com/capix

CAPIX evolution

LED media luminaire

Casinos Austria AG, Bregenz | AT

Lighting solution: CAPIX evolution media luminaire for façades

If required, the sequence of façade illumination can also be changed on short notice.

Getting messages across

CAPIX evolution transforms any static façade into a moving and emotive media façade. In addition to generating colours and other effects, the intelligent video control system also makes it possible to run sequences of moving pictures or play videos.

A CAPIX chain consists of a large number of lighting points as well as a combination of data and supply cables. One of the special things about CAPIX is that the distance of the individual lighting points, and hence the resolution of the luminous media surface, can be customised to fit the viewing distance. Each CAPIX pixel incorporates three RGB LEDs, resulting in a bright and brilliant lighting effect, even if viewed from large distances.

The pixels are either mounted directly on the façade or on commercially available meshes and nets – two different brackets are available for these different supports. Defective pixels can nevertheless be individually replaced without any problems. Intelligent thermal management provides protection against overheating and allows the use of CAPIX evolution even at high ambient temperatures due to the luminaire's automatic dimming function.

CAPIX evolution

Light source

3 RGB LEDs per pixel

Power consumption

1 W per pixel

Luminous flux of luminaire

20 lm per pixel

Protection type/protection class

IP68

Temperature range

-30 °C to +50 °C (in operation)

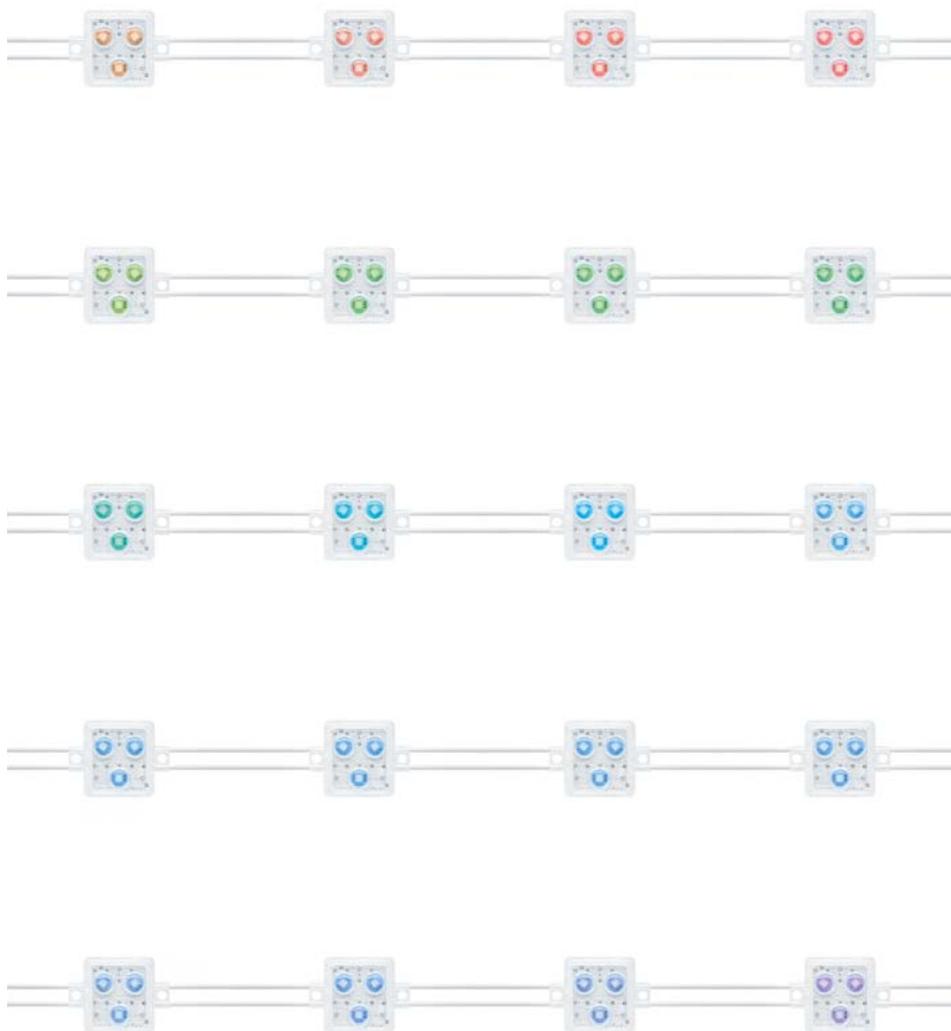

-30 °C to +80 °C (switched off)

A built-in overheating protection will automatically dim down the luminaire if the ambient temperature gets too high.

Accessories

DMX/RDM

Customer-specific manufacturing and service Zumtobel assists designers and contractors at every stage of a project, helping them to get to grips with the boundless possibilities of façade lighting and media façades in particular.

On a CAPIX media façade, pixel pitches are fully adjustable in order to cater perfectly for project-specific variables such as façade design, support structure or viewing distance. Zumtobel helps customers define pixel spacings and design the power supply and control systems. Zumtobel even supplies tailor-made control solutions – for running anything from simple graphics, pictures and videos through to interactive façades responding to their environment.

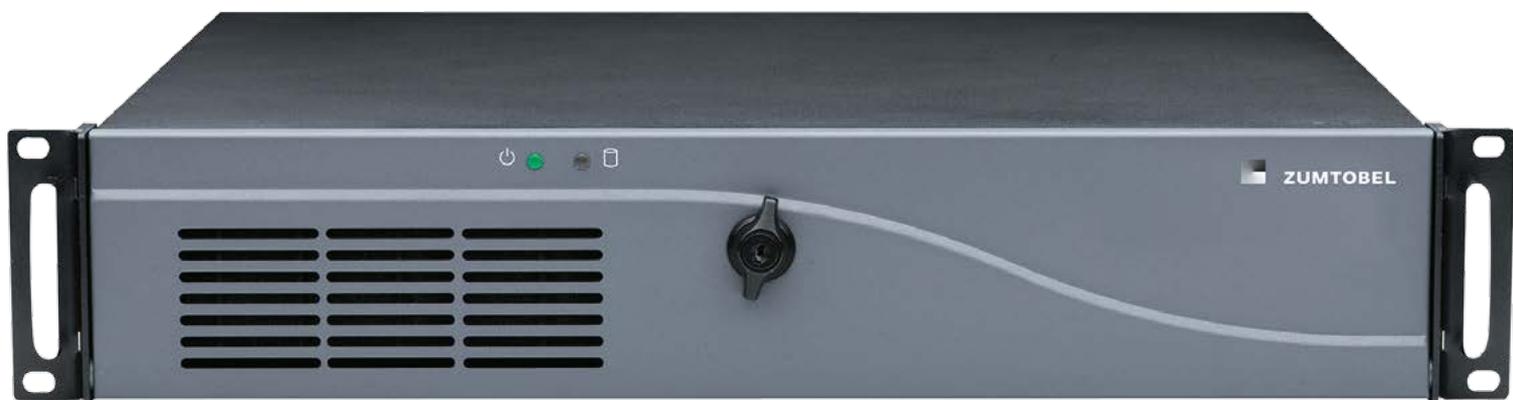

RGB LED pixels in a compact design, for perfect colour perception from any viewing angle.

LITENET

For Zumtobel, the responsible handling of resources spans all areas. As such, LUXMATE LITENET is an effective means to an end, achieving as much convenience and lighting quality as possible with a minimum of energy, materials and time invested. Demands coupled to energy consumption increase the economy of the CO₂ reducing measures even further. The legal basis for this was already laid down in the 2002/91/EC Energy Efficiency Directive. This presents planners, building developers and operators across Europe with major challenges; these, however, are optimally met by LUXMATE LITENET with its wide range of energy saving functions.

DMX control using Butler XT2

Butler XT2 is at the heart of Zumtobel's DMX controller. The controller has two independent DMX outputs, each with 512 channels, for individually controlling 1024 DMX channels or 340 RGB luminaires. This makes extensive, dynamic, time-controlled lighting programmes possible – even lettering that floats across a façade. Lighting Application Suite software allows qualified Zumtobel service engineers to fulfil almost any lighting design requirement. Programmed lighting scenes and sceneries are saved in the controller and retrieved via a premium glass touch panel or commercially available standard momentary-action switches.

The effectiveness of façade lighting is heavily dependent on the quality of the luminaires used and choosing the right lighting control system. A lighting management system is needed if more is required than simply switching luminaires on and off. Dimmed luminaires provide new ways of setting the lighting stage and also provide scope for using energy efficiently. Zumtobel lighting control systems cater for a variety of lighting tasks – from simple colour changes through to video control units.

Connecting PYLAS M RGB to DMX box

- DMX out: line to next DMX box
- Maximum cable length of entire DMX control line: 150 m
- Up to 32 DMX boxes can be connected per line
- A terminating resistor ($R = 120 \Omega$, 0.25 W, 5 %) must be used at the end of every DMX line between DMX+ and DMX-
- Maximum cable length in case of 24 V DC PWM: 50 m
- Up to 10 PYLAS M RGB per DMX box

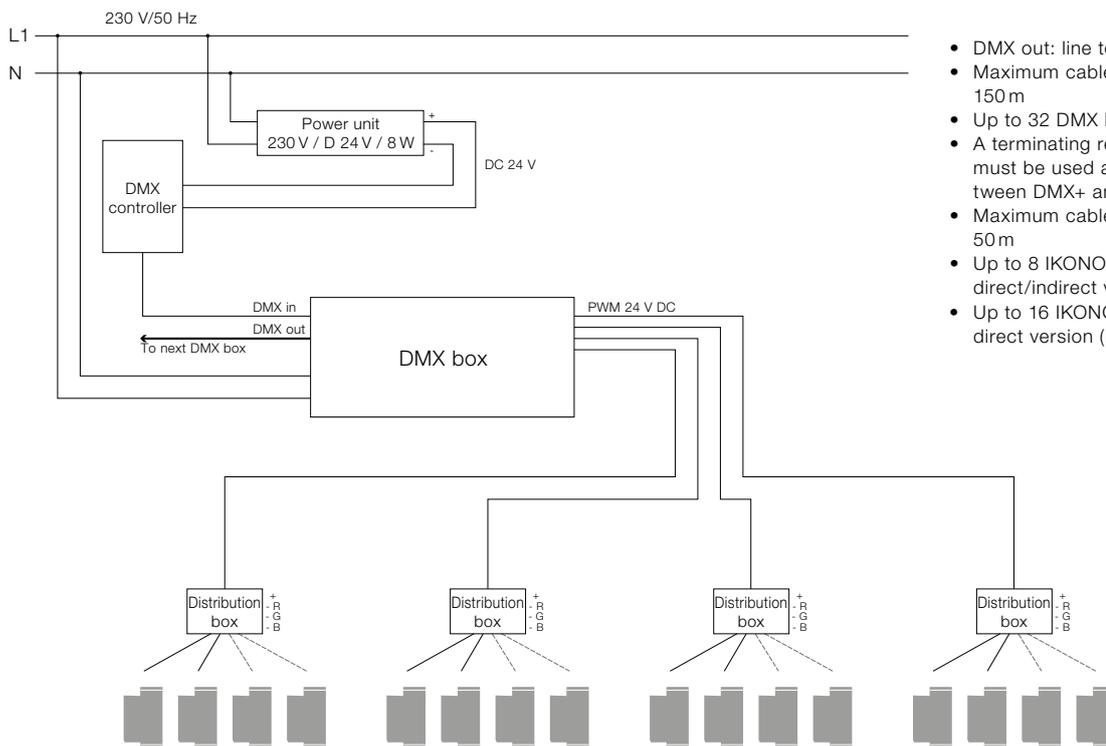

Connecting PYLAS S RGB to DMX box

- DMX out: line to next DMX box
- Maximum cable length of entire DMX control line: 150 m
- Up to 32 DMX boxes can be connected per line
- A terminating resistor ($R = 120 \Omega$, 0.25 W, 5 %) must be used at the end of every DMX line between DMX+ and DMX-
- Maximum cable length in case of 24 V DC PWM: 50 m
- Up to 20 PYLAS S RGB per DMX box

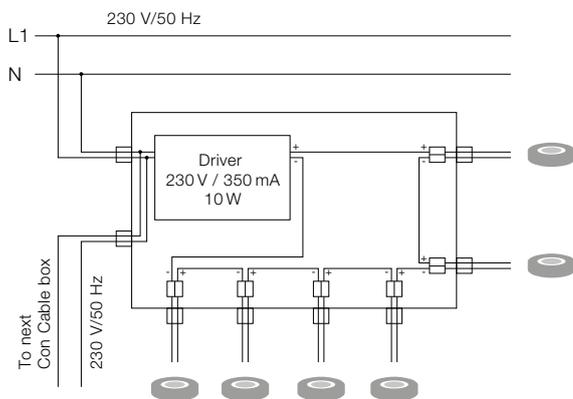

Connecting IKONO S RGB to DMX box

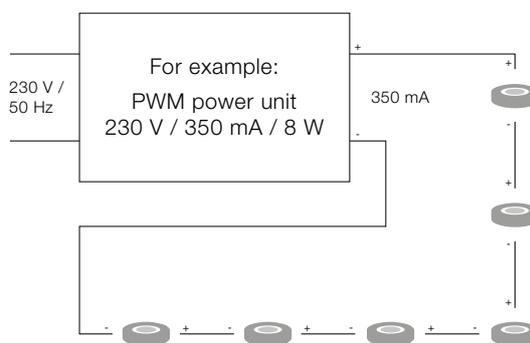

- DMX out: line to next DMX box (optional)
- Maximum cable length of entire DMX control line: 150 m
- Up to 32 DMX boxes can be connected per line
- A terminating resistor ($R = 120 \Omega$, 0.25 W, 5 %) must be used at the end of every DMX line between DMX+ and DMX-
- Maximum cable length in case of 24 V DC PWM: 50 m
- Up to 8 IKONO S RGB per DMX box in case of direct/indirect version (IKONO-I/D S RGB)
- Up to 16 IKONO S RGB per DMX box in case of direct version (IKONO-D S RGB)

Electrical connection of PAN luminaires to IP55 supply box (60 800 706)

PAN + feed line: brown/PAN - feed line: blue/standard length 3 m/ special lengths up to 10 m are possible

Project-specific solutions for dimmable installations using PAN

$6 \times 1.2W = 7.2W < 8W$ power unit (max. output)

IP55 supply box (60 800 706) makes it possible to connect up to 6 PAN luminaires. Individual luminaires are wired for series connection; cable glands make electrical contact easy. If not all 6 terminals are used, circuit is closed by factory-fitted jumpers. A second cable gland is provided for through-wiring.

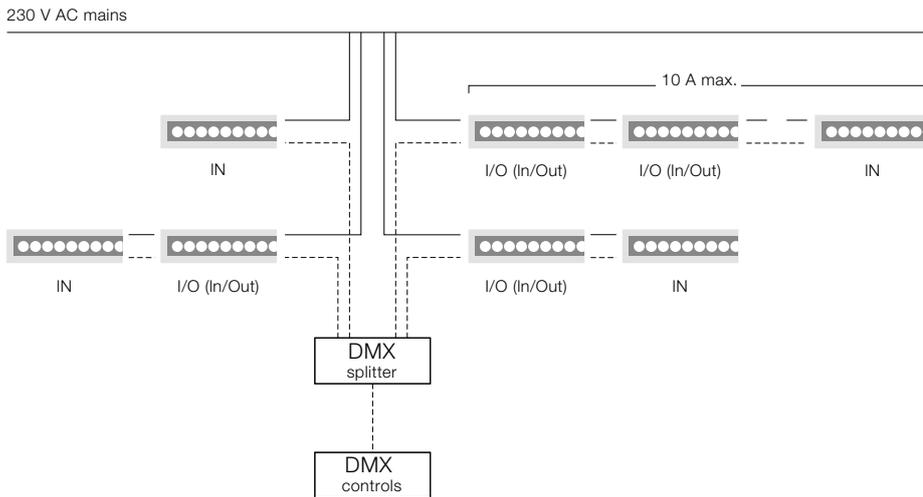

Dimmable or dynamic solutions are to be realised in a project-specific manner. Depending on the bus signal used (DALI, 1–10V, DMX or sequencer), PAN luminaires in the same group must be wired in series and connected to the appropriate 350 mA power unit of a box with IP protection or connected inside the building.

PYLAS S / M

[...] Shared properties PYLAS S / M

- Architectural spotlight luminaire for external illumination of objects and architectural details
- With superspot and flood beam pattern
- Housing made of die-cast aluminium (copper-free) with high corrosion protection
- Dual-layer epoxy and polyester powder-coating in silver-grey finish
- Luminaire cover made of toughened safety glass
- Glass cover fitted flush in luminaire surround to prevent dirt accumulation
- Silicone gasket
- Colour temperature: 3 200 K (LED832) or 6 000 K (LED860)
- Colour rendering index: Ra > 80
- IP66 degree of protection, equipment class I
- RGB: IP66 degree of protection, equipment class III
- Includes electronic power pack, switched
- Mains voltage: 230 V / 50/60 Hz
- RGB: 24 V DC PWM power supply provided by DMX ballast box (100 W) or LED power pack; please order separately
- Through-wiring not possible

PYLAS S LED

- [...]
- Stainless steel screws (AISI 316L)
- Luminaire can pivot from -40° to +90°
- PG cable gland
- LED RGB module (red/green/blue)
- Luminaire includes power lead with cable connector: 0.5 m (H05RN-F 3 x 1 mm²), RGB: 0.5 m (H05RN-F 4 x 1 mm²)
- Luminaire fixed by screw in luminaire base (not included)
- Earth spike or installation buckle available as optional accessory

[...] Shared properties ELEVO P1/P2

- Compact, low-profile LED spotlight for illuminating building facade features and surfaces
- Luminaire pre-wired with IP66 plug connectors
- Integrated over-temperature protection continuously dims luminaire with over-temperature from 50 °C
- LED service life: 50 000 h at 70 % luminous flux
- IP66 degree of protection for indoor and outdoor use; installation instructions (cable feed-through and separations) must be followed for outdoor applications
- Ambient operating temperature: -30 °C ... +60 °C
- Luminaire pre-wired using halogen-free leads
- 24 V converter for operating luminaires can be ordered separately
- Hinged brackets for floor or wall mounting; supply cable and IP66 plug/socket available as accessories

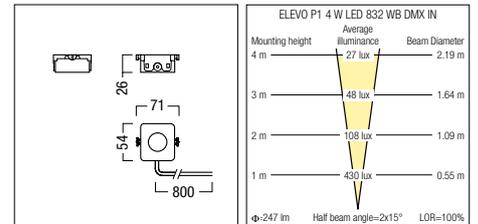

ELEVO P1 RGB / Monocolor DMX

- [...]
- Available with narrow (NB, 22°), wide (WB, 37°) or elliptical (43° x 16°) light distribution
- Light colour: RGB (red/green/blue) for variable colour modification
- Luminaire controllable via DMX
- Exclusive dual guide system for simple, error-free installation

HEDERA LED light line

[...] Shared properties HEDERA

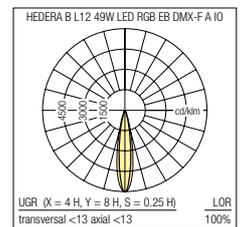

- Available as through-wired luminaire for series connection (IO) or as a single luminaire (IN) for a line termination with integral DMX terminating resistor
- Lengths: 600, 900, 1200 mm
- IP65 degree of protection for indoor and outdoor use; installation instructions (cable feed-through and separations) must be followed for outdoor applications
- IP65 housing made of anodised aluminium with 4 mm safety-glass cover
- High-power LEDs with efficient secondary optic for elliptical beam angle (EB - 10° x 20°); also available in narrow-beam (NB - 6°) and widebeam (WB - 35°) version
- Luminaire pre-wired with IP65 plug connectors
- Built-in overtemperature protection
- Ambient operating temperature: -20 °C ... +40 °C
- Ambient temperature in OFF state: -20 °C ... +60 °C
- IP65 connector and pivoted mount for floor or wall installation are available as accessories

- Socket or socket-plug set for power supply (230 V) in IP65 degree of protection
- XLR socket or socket-plug set for data (DMX) connection, 5-pin in IP65 degree of protection
- Adjustable bracket for mounting on floor, ceiling or wall
- Clip for floor or ceiling installation (TECTON AD)
- Splitter for connecting up to 4 DMX lines to up to 32 luminaires each
- ASTO Adresser and service tool for addressing, retrieving and setting luminaire values
- Adapter cable for connecting a HEDERA luminaire to the ASTO USB tool or to the SPLITTER DMX VC
- DMX - terminating resistor plug for line termination

IKONO S

|...| Shared properties IKONO S

- With spot and flood beam pattern
- Once luminaire is fitted, the light cone can be readjusted in a range of about $\pm 15^\circ$
- Housing made of aluminium extrusion and die-cast aluminium (copper-free) with high corrosion protection
- Dual-layer epoxy and polyester powder-coating in silver-grey finish for best possible resistance
- Luminaire cover made of toughened safety glass
- Glass cover fitted flush in luminaire surround to prevent dirt accumulation
- Silicone gasket
- Luminaire body fixed to wall-mounting plate by 4 Allen screws
- Plug-in connector provides electrical connection to luminaire body and wall-mounting plate
- Cable entry via grommet
- Colour temperature: 3 200 K (LED832) or 6 000 K (LED860)
- Colour rendering index: $R_a > 80$
- LED RGB module (red/green/blue)
- IP65 degree of protection, Class of protection I
- RGB: IP65 degree of protection, equipment class III
- Power connection: via 3-pole terminal strip or 4-pole terminal strip (RGB) on the wall-mounting plate
- Includes electronic power pack, switched
- Mains voltage: 230 V / 50/60 Hz
- RGB: 24 V DC PWM power supply provided by DMX ballast box (100 W) or LED power pack; please order separately
- Wall-mounting plate fixed to wall by 3 screws (not included)
- Through-wiring is possible

IK09 IP65 850 °C LED

- Square LED wall-effect luminaire with directional lighting in 2 or 4 directions
- Housing made of die-cast aluminium (copper-free) with high corrosion protection
- Dual-layer epoxy and polyester powder-coating in silver-grey finish for best possible resistance
- Cable entry via grommet
- Transparent lenses made of toughened safety glass
- Optical system comprises conical, highly specular reflector and LED board unit emitting indirect light beam
- Colour temperature: 6000 K
- Colour rendering index: Ra > 80
- Includes electronic power pack, max. 25 W switched; dimmable on request
- Power consumption: 10 W
- IP65 degree of protection, Class of protection I
- Connection: 3-pole terminal strip
- Mains voltage: 230 V 0/50/60 Hz
- Through-wiring is possible
- Luminaire housing fitted to wall plate using 4 Allen screws
- Mounted on wall using two fixing screws (not included)

APHRODITE LED

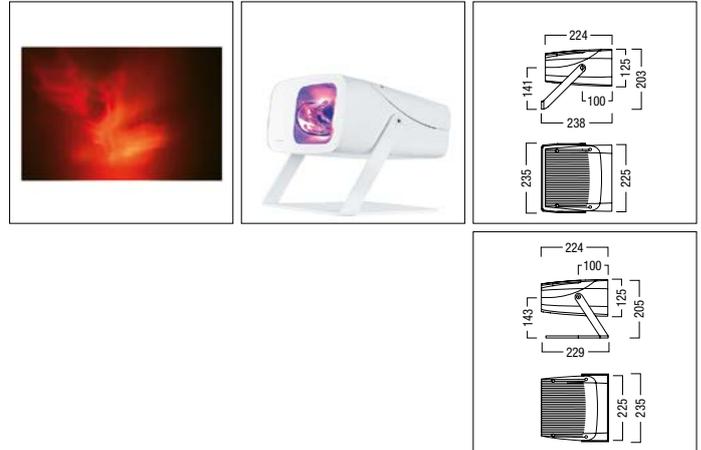

- Spotlight designed for practical and emotional lighting effects on vertical surfaces indoors and out using white light, coloured light or combinations
- Optical system comprises LED module and specially shaped glass cylinder controlled via stepper motor (patent pending)
- Seven preset lighting scenes are available for selection: white, colour-variable (RBA: red, blue, amber) and combinations of both
- Speed of lighting scenes can be adjusted manually using pushbutton on spotlight (3 levels, stand alone) or controlled externally using the DMX protocol (20 levels)
- Light projection effects generated on random basis with continuous variation in light pattern produced by different colour and brightness curves
- Luminaire can pivot in the mounting bracket and be locked in position
- Die-cast aluminium housing and aluminium fixing bracket in matt white powder-coated finish with high corrosion protection
- The front glass panel (clear) with ceramic printing is thermally hardened and is bonded tightly onto the spotlight housing for a reliable seal
- Glass cylinder made of borosilicate glass with glass deformations for light refraction
- DMX version: addressing of DMX control via rotary switch on rear of housing
- DMX connection (512-A standard) via DMX-IN / DMX-OUT with 0.02 m lead on spotlight
- LED module: white light with colour temperatures: 3 000 K, 4 200 K, 6 500 K and RBA (colour-variable): amber, red, blue
- Service life: 35 000 h at 70 % luminous flux
- IP65 degree of protection, Class of protection I
- Power lead: 3 m with safety plug (IP44), not suitable for CH or GB
- Mains voltage: 230–240 V / 50/60 Hz
- Luminaire fitted to wall, ceiling or floor using mounting bracket (for DMX version) or base
- Ideal for use in wellness areas and swimming pools

DMX 5-pin XLR5 socket with 120 Ohm resistor, IP65/67	60 800 741

- Recessed luminaire for illuminating window recesses or lighting architectural details on a building facade
- Accent spot with lens optic
- With spot, flood or asymmetric / ellipsoid beam pattern
- Housing made of die-cast aluminium (copper-free) with high corrosion protection
- Dual-layer epoxy and polyester powder-coating in silver-grey finish for best possible resistance
- Luminaire cover made of chemically toughened, transparent safety glass, fixed using silicon adhesive
- PG cable gland
- Colour temperature: 3200 K (LED832) or 6000 K (LED860)
- Colour rendering index: Ra > 80
- IP65 degree of protection, equipment class III
- Operating current: 350 mA
- Luminaire includes power lead: 3 m (H07RN-F 2 x 1 mm²)
- Luminaire fitted using two M3 x 12 screws (included with product)
- Electronic ballast box (60 800 706), max. 10 W, 350 mA, 230 V 50/60 Hz, switched; for supplying up to 6 PAN luminaires; please order separately

[...] Shared properties LEDOS III L

- LED accent spotlight with lens optic for ceiling or floor installation
- Luminaire housing made of die-cast aluminium, white powder-coated
- Uniformly illuminated, frosted-look protective cover
- Partially frosted glass cover (Spot / Flood models)
- LED unit can tilt through $\pm 15^\circ$ (Spot / Flood models)
- High-Power-LED with Superspot, Flood or flat lens optic
- Colour temperature: 3200 K (LED832) or 6000 K (LED860)
- Colour rendering index: $R_a > 80$
- Degree of protection IP67, IP65 (when installed in closed ceilings)
- Protection class I
- With built-in power supply for 230 V operation
- Installed load: approx. 2.1 W
- Power lead: 1.5 m (3-pole), with PG cable gland on housing
- Max. load for pedestrian traffic: 1000 kg
- Impact strength: IK 08
- Maximum surface temperature of protective cover is 40°C
- Use concrete casting surround for installing in concrete floors and ceilings (please order separately)
- Luminaire fixed in concrete casting surround by stainless steel clips on luminaire housing
- Installation kit required for installation in cavity floors or ceilings (10–25 mm) (please order separately)
- External loop-in/loop-out of cable possible using IP67 universal box; please order separately

Accessory

Concrete casting surround LEDOS III L Q85	60 800 751
LEDOS III L installation kit for cavity floors and ceilings	60 800 753

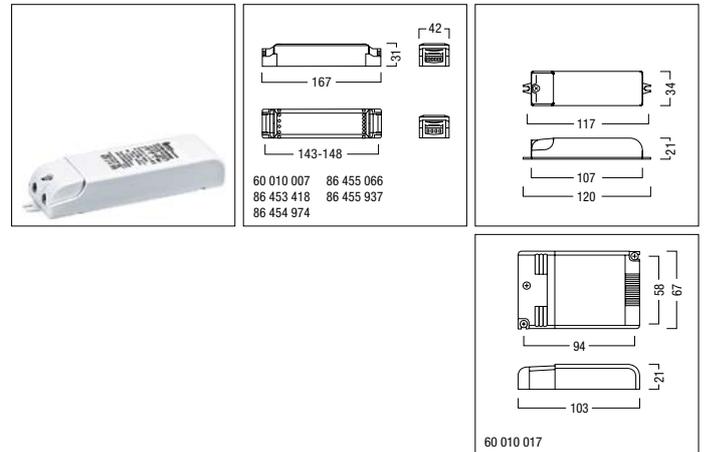

LED power packs

- LED power pack (60 010 022), output signal 24 V DC, output power 10 W
- LED power pack (86 453 418), output signal 24 V DC, output power 25 W
- LED power pack (60 010 017) with 24 V DC output signal (by DIP switch), max. output power 20 W; switched, optionally dimmable (pushDIM, 1–10 V)

LED power packs

	L/W/H	kg	Order no.
LED power pack 10 W, 230 V-AC / 24 V-DC	120/34/21		60 010 022
LED power pack 25 W, 230 V-AC / 24 V-DC		0,2	86 453 418
LED power pack max. 25 W UNI (350–750 mA or 10/12/24 V by Dip Switch) / 1–10 V, 110–240 V AC	103/67/21	0,1	60 010 017

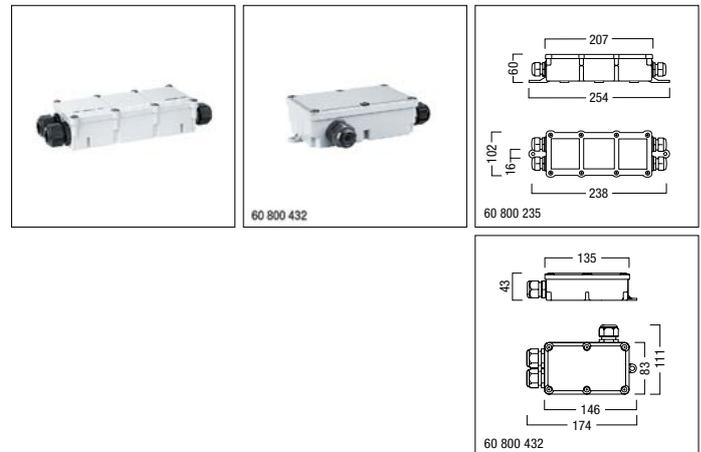

Universal boxes

Order no.

- IP67 multipurpose box (60 800 235): designed for connecting up to 4 suitable cables; can be used to accommodate control gear or for loop-in/loop-out of mains power lines or bus lines.
- Cable entry via 4 SW32 (M25) cable glands for cable Ø 6.4–16 mm; includes 2 cable-gland plugs; 6-pole connecting terminal, max. conductor cross-section 4 x 2.5 mm²
- IP67 MINI multipurpose box (60 800 432): enables connection of up to 3 suitable cables (H07RN-F, etc.); for loop-on/loop-out of mains cables outside luminaire unit
- Three SW25 PG cable glands for cables Ø 4.3–11.9 mm; 4-pole connecting terminal, max. conductor cross-section 2.5 mm²

Universal boxes

IP67 multi-purpose box for transformer or through-wiring IP67	60 800 235
MINI IP67 multi-purpose box for transformer or through-wiring	60 800 432

Cable connectors

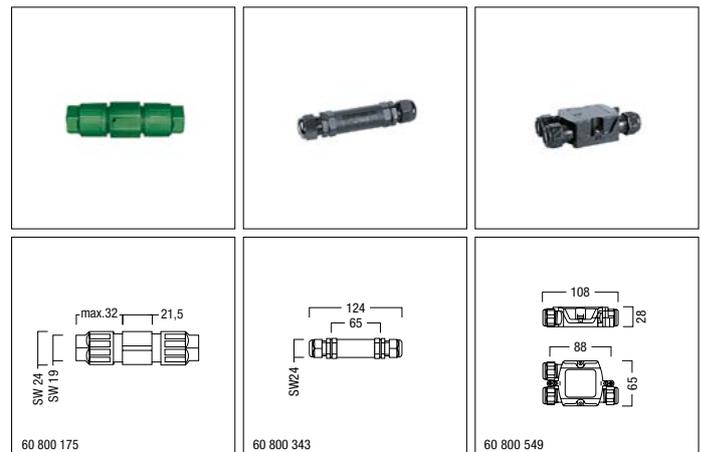

Order no.

- IP67 cable connector (60 800 175): 4-pole, max. 1,5 mm²; cable ends are fed through gland (providing seal) into cable connecting terminal; cables can be disconnected, e.g. when replacing LED circuit boards modules
- IP67 cable connector (60 800 343): 3-pole, 4 mm²; cable ends are fed through gland into screw terminals; cables can be disconnected if needed
- Cable connector for 3 cables, IP67 (60 800 549): 3-pole, 1.5 mm², IP67; allows up to 3 cables to be connected plus connecting terminal; can also be used for cable loop-in/loop-out

Cable connector

3-way IP67 cable connector, 3 x 1.5 mm ²	60 800 549
IP67 cable connector, 3 x 4.0 mm ²	60 800 343
IP67 cable connector, 4 x 1.5 mm ²	60 800 175

60 800 175: suitable for LEDOS III M / L.

PASO II D120/Q120

[...] Shared properties PASO II 120

- Die-cast aluminium housing in powder-coated finish
- Colour: White
- Stainless steel trim with Camlock fasteners (no screws visible)
- Includes gasket to help prevent water penetrating between luminaire unit and casting surround
- PG cable gland
- Max. load for pedestrian traffic: 1000 kg; without trim: 500 kg
- Please always install with flexible cables e.g. H07RN-F
- Installed in concrete floors or pavings using concrete casting surround kit
- Model with overlapping trim: installation kit required for fitting in wooden or cavity floors; please order separately
- Model without trim: glass panel fixed by 4 torque screws
- Models with class "R10" anti-slip glass covers available upon request
- External loop-in/loop-out of cable possible using IP67 universal box; please order separately

PASO II D120 LED circular

- [...]
- Access spot with approx. 10° spot beam pattern (Power-LEDs with lens optic)
- Partially frosted protective cover
- Colour temperature: 3200 K (LED832: warm white) or 6000 K (LED860: daylight white)
- Includes control gear
- Connection: 3-pole terminal strip
- Power-LED: swivels through ±20°
- Power consumption: 3.6 W
- IP67 degree of protection, Class of protection I
- Mains voltage: 230–240 V / 50/60 Hz
- Surface temperature of glass panel 37 °C maximum
- Neutral-white colour temperature available on request

Accessory

13.5 cable gland in special steel (V2A)		60 800 294
Concrete casting surround kit D190, H = 100 mm		60 800 340
D/Q190 installation kit for timber and cavity walls		60 800 191
D/Q190 mounting kit for downlight and wall-mounted position		60 800 293
D190 glass seal		60 800 276

[...] Shared properties PASO II 190

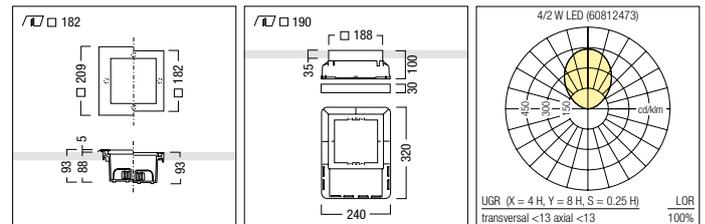

- Die-cast aluminium housing in powder-coated finish
- Colour: White
- Stainless steel trim with Camlock fasteners (no screws visible)
- Includes gasket to help prevent water penetrating between luminaire unit and casting surround
- Max. load: 1000 kg, can be walked over
- IP67 degree of protection, Class of protection I
- Mains voltage: 220–240 V / 50/60 Hz
- Installed in concrete floors or pavings using concrete casting surround kit
- Model with overlapping trim: installation kit required for fitting in wooden or cavity floors; please order separately
- Models with class "R10" anti-slip glass covers available upon request

PASO II Q190 Soft LED square, recessed depth 100 mm

- [...]
- Frosted protective cover with diffuser
- Power lead: 0.5 m (3-pole), with PG cable gland on housing
- Includes control gear
- Colour temperature (LED module): 3200 K (warm white) or 6650 K (daylight white)
- Power consumption: 4.8 W
- Surface temperature of glass panel 35 °C maximum
- Please always install with flexible cables e.g. H07RN-F
- External loop-in/loop-out of cable possible using IP67 universal box; please order separately
- Neutral-white colour temperature available on request

	EL/EB/ET	Order no.

 - Partially frosted protective cover
 - PG cable gland, through-wiring possible
 - Colour temperature: 3200 K (LED832: warm white) or 6000 K (LED860: daylight white)
 - Includes control gear
 - Connection: 3-pole terminal strip
 - Power-LED: ±15° tilt
 - Power consumption: 17.5 W
 - Mains voltage: 220–240 V / 50/60 Hz
 - Surface temperature of glass panel 40 °C maximum
 - Please always install with flexible cables e.g. H07RN-F
 - Neutral-white colour temperature available on request
 - Square versions available on request

- IP67 multipurpose box (60 800 235): designed for connecting up to 4 suitable cables; can be used to accommodate control gear or for loop-in/loop-out of mains power lines or bus lines.
- IP67 MINI multipurpose box (60 800 432): enables connection of up to 3 suitable cables (H07RN-F, etc.); for loop-on/loop-out of mains cables outside luminaire unit
- IP67 cable connector (60 800 175): 4-pole, max. 1,5 mm²; cable ends are fed through gland (providing seal) into cable connecting terminal; cables can be disconnected, e.g. when replacing LED circuit boards modules
- IP67 cable connector (60 800 343): 3-pole, 4 mm²; cable ends are fed through gland into screw terminals; cables can be disconnected if needed
- Cable entry via 4 SW32 (M25) cable glands for cable Ø 6.4–16 mm; includes 2 cable-gland plugs; 6-pole connecting terminal, max. conductor cross-section 4 x 2.5 mm²
- Three SW25 PG cable glands for cables Ø 4.3–11.9 mm; 4-pole connecting terminal, max. conductor cross-section 2.5 mm²
- Cable connector for 3 cables, IP67 (60 800 549): 3-pole, 1.5 mm², IP67; allows up to 3 cables to be connected plus connecting terminal; can also be used for cable loop-in/loop-out

Accessory

3-way IP67 cable connector, 3 x 1.5 mm ²	60 800 549
IP67 cable connector, 3 x 4.0 mm ²	60 800 343
IP67 cable connector, 4 x 1.5 mm ²	60 800 175

HILIO LED light line Monocolor

|...| Shared properties HILIO monocolor

- LED surface-mount light line for direct, decorative or linear lighting, for indoor and outdoor use
- Available as luminaire with loop-in/loop-out wiring for series connection (IO) or as an individual luminaire (IN) for a line termination
- Luminaire can be switched or can be dimmed under PWM control
- LEDs with light colour 3000 K, 4000 K, 5000 K, red, green or blue
- Luminaire pre-wired with IP65 plug connectors
- Built-in overtemperature protection
- Ambient operating temperature: -20 °C ... +40 °C
- Ambient temperature in switched-off state: -20 °C ... +70 °C
- LED service life: 60000 h for a reduction in luminous flux to 70 % of original level
- IP65 degree of protection for indoor and outdoor use; installation instructions (cable feed-through and separations) must be followed for outdoor applications
- Radial or axial connection to space-saving combi-cable carrying 24 V supply and data
- Module lengths 2100 mm or 1200 mm (lengths optionally available in multiples of 300 mm)
- Luminaire includes protection against polarity reversal
- Halogen-free wiring used in luminaire
- 24 V converter for operating luminaires at a distance of up to 12.6 m, please order separately
- Power lead and IP65 socket/plug available as accessories

HILIO LED light line RGB

[...] Shared properties HILIO RGB

- LED surface-mount light line for direct, decorative or linear lighting, for indoor and outdoor use
- Available as through-wired luminaire for series connection (IO) or as single luminaire (IN) for a line termination including built-in termination resistor
- RGB LEDs with 30 mm pixel pitch; when radial cable connector is used, the pixel pitch is maintained in a cascaded luminaire arrangement
- Integral over-temperature protection dims luminaire smoothly when temperature above 40 °C
- Ambient operating temperature: -20 °C ... +40 °C
- Ambient temperature in switched-off state: -20 °C ... +70 °C
- LED service life: 40 000 h for a reduction in luminous flux to 70 % of original level
- Luminaire pre-wired with IP65 plug connectors
- IP65 degree of protection for indoor and outdoor use; installation instructions (cable feed-through and separations) must be followed for outdoor applications
- Radial or axial connection to space-saving combi-cable carrying 24 V supply and data
- Module lengths 2 100 mm or 1 200 mm (lengths optionally available in multiples of 300 mm)
- Luminaire pre-wired using halogen-free leads
- Connection kit for operating up to 12.6 m luminaires and connecting the data lead, please order separately
- Power and extension lead available as accessory
- DMX addressing performed using addressing tool (ASTO USB and ASTO set)

CAPIX

CAPIX evolution

- LED pixels for decorative media illumination indoors and outdoors
- For use in various types of façades such as aluminium profiles, plates, with screws etc.; adapted individually to the project
- Light colour: RGB for colour variation (3 RGB LEDs)
- Pixel-accurate addressing
- Pixel distance possible between 10 cm and 30 cm
- Up to 50 pixels per line (depends on cable lengths and pixel separation)
- DMX control for variable colour changes and displaying images and text
- Video control if higher bit rates are required
- 3 RGB LEDs per pixel give a luminaire luminous flux of up to 20 lm
- Exclusive dual guide system for simple, error-free installation
- Control via CAPIX evolution controller, please order separately
- Protection type IP68
- LED service life: 50 000 h at 70 % luminous flux
- Permissible ambient temperature: -30 °C ... +60 °C
- Ambient temperature in switched-off state: -30 °C ... +70 °C
- Built-in overtemperature protection
- More detailed information or customer-specific CAPIX evolution facade solution on request

Zumtobel, a company of the Zumtobel Group, is an internationally leading supplier of integral lighting solutions for professional indoor and outdoor building lighting applications.

- Offices and Communication
- Education and Science
- Presentation and Retail
- Hotel and Wellness
- Art and Culture
- Health and Care
- Industry and Engineering
- Façades and Architecture

We provide unique customer benefits by integrating technology, design, emotion and energy efficiency. Under the Humanergy Balance concept, we combine the best possible ergonomic lighting quality for an individual's well-being with the responsible use of energy resources. The company's own sales organisations in twenty countries, as well as commercial agencies in fifty other countries, form an international network of experts and design partners providing professional lighting consulting, design assistance and comprehensive services.

Lighting and sustainability

In line with our corporate philosophy *"We want to use light to create worlds of experience, make work easier and improve communications and safety while remaining fully aware of our responsibility to the environment"*, Zumtobel offers energy-efficient high-quality products, while at the same time making sure that our production processes based on the considerate use of resources are environmentally compatible.

zumtobel.com/sustainability

Top quality – with a five-year guarantee.
As a globally leading luminaire manufacturer, Zumtobel provides a five year manufacturer's guarantee on all Zumtobel branded products in accordance with the terms of guarantee at zumtobel.com/guarantee.

Order no. 04 924 301-EN 06/15 © Zumtobel Lighting GmbH
Technical data was correct at time of going to press.
We reserve the right to make technical changes without notice. Please contact your local sales office for further information. For the sake of the environment: Luxo Light is chlorine-free paper from sustainably managed forests and certified sources.
