A quick reference product guide

## Light for presentation and retail

Shopping is increasingly becoming a leisure activity for which special settings are created. Shopping centers and shops are being transformed into spaces designed to entertain visitors and convey messages. Light is used to arouse emotions and create brand identities. When used intelligently, light has the potential to stimulate the propensity to purchase, thereby boosting sales. Light creates added value – especially if the lighting concept and lighting control can be identified and handled as a single unit. Lighting effects and colored light give people cause to pause for a moment. Lively lighting scenarios with an abundance of ever-changing sequences banish monotonous lighting. Four trends are set to shape the design of lighting solutions for presentation and retail over the next few years: center-stage settings, authenticity, naturalness and sustainability. Zumtobel makes it possible to implement solutions that respond to these trends in a people-friendly, energy-efficient manner.

**Hugo Boss flagship store, New York / NY**  
Architect: Matteo Thun & Partners, Milan / IT

Users are at the heart of contemporary office concepts and, hence, interior design and office lighting. Intelligent lighting solutions help increase people's sense of well-being and create identity while cutting costs. Zumtobel is an experienced office lighting expert. We have amassed extensive knowledge over the years from application and research in the sphere of using light in offices. The consistent further development of our products is based on user studies on the effects of light and on perceived lighting quality. Lighting solutions by Zumtobel create working conditions that make people feel good, thus motivating them and making them more effective. Lighting scenes that can be adjusted to users' personal preferences by means of variable color temperature and quantity of light can both increase employee satisfaction and create identity. High-quality product design and architectural lighting design also play a major role here. Simultaneously, innovative technologies and control systems can reduce energy and maintenance costs. This is how Zumtobel optimizes lighting quality and energy efficiency.
