Enhancing the sense of wellbeing

A successful lighting solution creates visual conditions that make people feel at ease. It should motivate them and help them concentrate on what they need to do. Parameters such as uniform illumination of task areas, bright walls and ceilings plus a pleasant atmosphere can have a direct impact on the physical and mental wellbeing of individuals.

Creating identity

Lighting scenes that can be adjusted to meet user preferences by means of variable colour temperature and light intensity help increase employee satisfaction and create identity. High-quality product design and architectural lighting design also play a significant role.

Reducing costs

Energy efficiency, long service life and lighting management systems enable lighting solutions to play a key role in reducing overall operating costs. The reputation and importance of a company or building will also benefit from a sustainable approach.

A modern office concept

Symantec helps individuals and organizations manage and secure their information in an increasingly data-driven world. They offer storage, back-up and security software, along with a range of professional support services. According to W3Techs, who monitor the usage of online technologies, Symantec ranks as one of the most popular global internet and computer security suppliers. The Symantec office in Dubai is responsible for the Middle East region and also includes state-of-the-art training facilities.

Lighting solutions: MICROS LED downlight, PANOS infinity downlight, ECOOS pendant luminaire and LINCOR pendant luminaire

Light for offices and communication

Users at the heart of contemporary office environments

♥ Enhancing the sense of wellbeing

Based on the latest Zumtobel office study, conducted together with the renowned Fraunhofer research institute in Germany, over 82 percent of office workers prefer a lighting solution with both direct and indirect lighting components. In addition, users who work in an area with direct/indirect luminaires rate their sense of wellbeing markedly higher than those with a purely direct lighting solution.

Every element of the new office design was carefully planned to optimise the comfort and wellbeing of the Symantec employees. In line with the findings of the Zumtobel research, the lighting design team created a pleasant and stimulating atmosphere by consciously utilizing the different characteristics of light. Two downlight families are used to illuminate the general areas of the office such as the reception and corridors: MICROS and the IF design award-winning PANOS infinity. MICROS achieves maximum functionality despite its compact size. PANOS infinity offers a class-leading combination of performance and efficiency, with aspects such as a colour rendering of Ra 90 ensuring excellent lighting quality.

Creating identity

The Symantec offices have several spacious meeting rooms that are also used for customer training. With its slim and unobtrusive design, the LINCOR LED luminaire draws an elegant line through these spaces. Arranged as a series of parallel light lines, LINCOR adds an elegant design touch with excellent energy efficiency of more than 88 lumens per watt. An effective direct lighting component is balanced with an indirect component that boosts visual comfort through the gentle illumination of the ceiling. Helping the environment with sustainable solutions is an issue for us all. Symantec has clearly shown how to achieve this without compromising quality. At the same time, employees feel valued in the workplace and therefore have a positive impression of the company.

Reducing costs

The design and layout are perfect examples of a modern office concept. Light and friendly colours run through the office and large windows allow plenty of daylight to enter the rooms. Natural light supports employee wellbeing whilst making a significant contribution towards energy saving. However, the temperatures in Dubai can reach 50° Celsius during the summer months. Employees can now adjust the blinds instead of turning up the air conditioning and using more energy.

Intense sunlight also disturbs users working with computers and tablets, as reflections and glare can make it difficult to concentrate. Continuous lines of ECOOS illuminate the open office areas. The microprismatic optic gives the iF design award-winning luminaire a distinctive sparkle and provides all-round illumination with a single light source. Visual appeal and efficiency in harmony.

“I really enjoy working in this spacious and modern office. I like it when visitors are impressed by the concept and the design. That makes me proud to be taking care of this office.”

Milany Tay, Receptionist & Facilities Coordinator, Symantec Offices in Dubai
