Product innovations and additions

Autumn 2017

The way that natural light changes through the course of the day has influenced human beings since the dawn of time. Zumtobel uses this knowledge to shape the design of artificial light – light that truly supports the biological, visual and emotional needs of the individual. In line with the concept of ‘Active Light’, luminaire families for indoor and outdoor areas are developed to put the focus firmly on people and their sense of wellbeing. This approach is perfectly illustrated by the light tools presented in the Highlights Autumn 2017. The SUPERSYSTEM II miniaturised LED lighting system, with its new and carefully considered components for architectural lighting, increases creative freedom to help actively shape our perception and stimulate our senses. In outdoor applications, the NIGHTSIGHT modular LED luminaire presents itself as an effective instrument with which to transform streets, pathways and places into living spaces with real social character.

NIGHTSIGHT | Architectural LED outdoor luminaire

NIGHTSIGHT

Turning public spaces into active places

The urban space is constantly changing, becoming gradually more animated as darkness falls – a gentle transition that is supported by the NIGHTSIGHT portfolio. This range of puristic outdoor light tools delivers both safety on roads and pathways and a welcoming atmosphere to encourage social interaction. The focused use of light and shadows, as well as the combination of vertical and horizontal light planes, enables the creation of differentiated scenarios. In this way, light becomes a formative tool for attractive cities, where urban spaces are increasingly evolving into active and lively places to meet and greet others.

The wellbeing of people in squares and on pathways is enhanced by the Area luminaire with softGlow optics, which uses precise light guidance to deliver excellent visual comfort. The Projector luminaire with a discreet darkBeam optic has been specifically engineered to illuminate facades and emphasise architectural details. The NIGHTSIGHT modular LED outdoor lighting system shapes urban life with a consistent design language and a clear focus on the individual.

This LED outdoor luminaire shapes urban life by putting the focus on the individual.

SUPERSYSTEM II | Recessed spotlight

SUPERSYSTEM II

Creating emotional light experiences

SUPERSYSTEM II stands for light experiences that are in a class of their own. This multifunctional LED light tool and its range of clever and innovative components offer everything required to fulfil numerous lighting tasks in the fields of presentation and sales, art and culture and hotel and wellness. Delicate design, rigorous miniaturisation and superb flexibility have come to characterise this extensive product family.

Now the portfolio benefits from the addition of recessed downlights and spotlights in three sizes, along with a recessed track. Corner connectors and accessories for suspension or integration of the control gear into a ceiling rose also broaden the scope for design. The SUPERSYSTEM II LED lighting system delivers varied solutions in different spaces with excellent light quality and a consistent style - for general lighting, accent illumination and wall-washing.

This multifunctional LED lighting tool is characterised by delicate design, rigorous miniaturisation and superb flexibility.

Retail Additions

Trackbox XXS An elegant box for control gear

The Trackbox XXS directly reflects the trend towards miniaturised LED spotlights and lighting systems. The dimensions of the housing, with a 3-phase adapter and control gear, match those of the track. This unique solution thereby makes the technology almost invisible. The combination of track, spotlights such as VIVO XS or VIVO M and the durable Trackbox XXS creates an aesthetic unit with clear lines – a new benchmark in purism.

Retail TGR Gen2
LED technology for vibrant colours

Differentiation drives success. When it comes to shop lighting, TGRfashion technology presents clothing with a vibrant colour effect and thereby paves the way for a stimulating retail experience. The extraordinary colour rendering especially helps white, pastel and strong colour tones stand out with fantastic quality and unprecedented brilliance. LED spotlights with "True Gamut Rendering" technology also accentuate the particular material properties of different fabrics.

ARCOS WW liteCarve®
A spotlight to optimise the enjoyment of art

The introduction of the classical ARCOS WW liteCarve® LED spotlight for vertical lighting marks the start of a new era for consistent design language in museums and galleries. This product perfectly blends the minimalist look of an ARCOS spotlight with outstanding wall-washing qualities, incorporating a special lens that makes full use of Zumtobel's patented liteCarve® free-form reflector technology. Works of art can be vertically illuminated with maximum uniformity and excellent colour rendering of $R_a > 98$ in rooms with heights of up to 5 metres. The ARCOS spotlight range therefore offers an ideal solution for every aspect of exhibit lighting.

Office Additions

SLOTLIGHT infinity RGBW
Colour dynamic light line

The latest model of the SLOTLIGHT infinity opens up a further dimension of colour. It is now possible to fulfil decorative as well as functional tasks with one single light. This is achieved by high light fluxes that can reach up to 1,800 lm per metre with white light. Thanks to newly developed LED boards with a high number of consistently arranged points of light, the colour dynamic light line guarantees perfect, uniform illumination even in corners.

DOT 28
Suspension system

Pendant luminaires as decorative lighting objects create timeless aesthetics for every interior. In line with this principle, the new DOT 28 suspension system supports a graceful and puristic appearance by perfectly harmonising with the design language of LED pendant luminaires. All electrical and mechanical connections are concealed in the ceiling, adding the ideal final touch to the floating appearance of VAERO, LINCOR or ECOOS. The only element visible from the outside is a 28 mm ceiling rose that integrates flush into a plasterboard, concrete or wooden ceiling. And so the effect of the space can be truly appreciated – in an elegant and undisturbed manner.

Design: Georg Bechter Licht, Langenegg | AT

MIREL evolution LRO
Recessed LED luminaire with brilliant optics

MIREL evolution LRO combines the high visual comfort of a Zumtobel LED luminaire with an exceptional appearance. The new brilliant optic ensures extremely homogeneous illumination of the workplace and good glare control with $UGR < 19$, while the excellent light quality is nicely complemented by an efficiency of over 112 lm/W. The square and rectangular versions of MIREL evolution LRO integrate seamlessly into every room with colour temperatures of 3000 or 4000 K.

ONDARIA 2 acoustic
Round wide-area luminaire with sound absorption

The round ONDARIA wide-area acoustic luminaire is optimised to meet the demands of contemporary offices that have an "open space" character, loft design or industrial look and feel. Covered with a fabric, the pendant and surface-mounted luminaires incorporate both a homogeneous light surface and - as an invisible added value - excellent sound absorption. The elegant ONDARIA fitting thereby complements interior architecture and simultaneously creates a pleasant working atmosphere.

TECTON MIREL LED

A harmonious linear luminaire

The best of both worlds: TECTON MIREL LED. Firstly TECTON scores maximum points with its high flexibility and sleek, restrained design. Then MIREL evolution harnesses sophisticated lighting technology to make it the ideal choice for demanding tasks that demand top visual quality. Put the two together and the result is TECTON MIREL LED, a fusion that is destined to open up new application fields and meet the differentiated requirements of cross-building lighting solutions with a uniform design language.
