<tr>
<td>SS CREDIT 8: Light pollution reduction</td>
<td>IEQ CREDIT 6.1 Controllability of systems – Lighting</td>
<td>IEQ CREDIT 8.1 Daylight and views – Daylight</td>
</tr>
</tbody>
</table>

## Intent

**To minimize light trespass from the building and site, reduce sky-glow to increase night sky access, improve night-time visibility through glare reduction and reduce development impact from lighting on nocturnal environments.**

**To provide a high level of lighting system control by individual occupants or groups in multi-occupant spaces (e.g. classrooms and conference areas) and promote their productivity, comfort and well-being.**

**To provide building occupants with a connection between indoor spaces and the outdoors through the introduction of daylight and views into the regularly occupied areas of the building.**

## Requirements

**Interior Lighting** *(Option 1 or 2 requisite)*

**Exterior Lighting** *(requisite)*

**Provide individual lighting controls for 90% (minimum) of the building occupants to enable adjustments to suit individual task needs and preferences.**

**Provide lighting system controls for all shared multi-occupant spaces to enable adjustments that meet group needs and preferences.**

**Demonstrate compliance through one of these four Options:**

**OPTION 1:** Computer simulation to prove sufficient daylight illuminance.

**OPTION 2:** Calculations for visible light transmittance and window-to-floor ratio.

**OPTION 3:** Floor plan with recorded light measurement results.

**OPTION 4:** Any of the above methods may be combined.

## Contribution by Zumtobel

**Specifications of Zumtobel control devices. Drawings with locations and sequence of operation of Zumtobel controls.**

**Luminaire data sheet including lamp lumen levels and photometric data (Exterior Lighting) e.g. Zumtobel PAN luminaire.**

**Illumination model / photometric site plan as a special Zumtobel service in coordination with the designer.**

**Zumtobel free-standing luminaires used in individual workspaces can help to increase the percentage of individual workstations with lighting controls.**

**Floor plans showing the zoning of the lighting along with the location and the type of the lighting controls can be used to document the availability of lighting controls.**

**A daylight simulation to demonstrate compliance to IEQ Credit 8.1 is a special Zumtobel service in coordination with the lighting designer.**

#### EA Energy & Atmosphere

<table>
<thead>
<tr>
<th>EA PREREQUISITE 1: Fundamental commissioning of building energy systems</th>
<th>EA PREREQUISITE 2: Minimum energy performance</th>
<th>EA CREDIT 1: Optimize energy performance</th>
<th>EA CREDIT 3: Enhanced commissioning</th>
</tr>
</thead>
<tbody>
<tr>
<td>To verify that the project’s energy-related systems are installed, calibrated and perform according to the owner’s project requirements, basis of design and construction documents. Benefits of commissioning include reduced energy use, lower operating costs, reduced contractor callbacks, better building documentation, improved occupant productivity and verification that the systems perform in accordance with the owner’s project requirements.</td>
<td>To establish the minimum level of energy efficiency for the proposed building and systems to reduce environmental and economic impacts associated with excessive energy use.</td>
<td>To achieve increasing levels of energy performance beyond the prerequisite standard to reduce environmental and economic impacts associated with excessive energy use.</td>
<td>To begin the commissioning process early in the design process and execute additional activities after systems performance verification has been completed.</td>
</tr>
</tbody>
</table>

### A commissioning authority (CxA) for the overall project has to be named, which is responsible for overseeing the commissioning activities.

The owner’s project requirements have to be documented and the CxA must review these documents.

A commissioning plan has to be developed and implemented.

The installation and performance of the systems must be verified.

A commissioning summary report has to be completed.

### Documentation and verification of project requirements as well as installation and performance of the lighting systems are documented in collaboration with a Zumtobel Project Manager and verification can be provided via the Light Performance Platform.

### The engineer doing the simulation will require a schedule with the installed load per room or room type together with information regarding controls.

Simulations are carried out using simulation software approved by LEED.

Daylight-based management and presence detection can be calculated by the simulation software directly. For all other saving potentials via controls a narrative will be required but it can not be guaranteed that arguments regarding additional saving potentials will be accepted.

### The percentage of energy cost saved in comparison to the baseline building must be demonstrated. The saving is calculated for the complete building, not only for lighting. The number of points depends on the percentage of energy cost saved in comparison to the baseline building for a 25% saving 5 points are awarded, for a 48% saving even 19 points. For details please refer to the LEED reference guide.

### Zumtobel Services offers additional extended Project Documentation as well as on-site training for facility managers and users if required. In addition, maintenance agreements are offered to ensure the systems’ correct functioning.

<th>ID CREDIT 1: Innovation in Design Process – Specific title</th>
<th>ID CREDIT 2: LEED accredited professional</th>
<th>RP CREDIT 1: Regional priority – Specific title</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Intent</strong></td>
<td>To provide design teams and projects with the opportunity to achieve exceptional performance above the requirements set by the LEED Green Building Rating System and/or innovative performance in green building categories not specifically addressed by the LEED Green Building Rating System.</td>
<td>To support and encourage the design integration required by LEED to streamline the application and certification process.</td>
<td>To provide an incentive for the achievement of credits that address geographically specific environmental priorities.</td>
</tr>
<tr>
<td><strong>Requirements</strong> PATH 1:</td>
<td>Innovation credits provide the opportunity to achieve credit for exceptional performance above the requirements set by LEED or innovative performance in Green Building categories not specifically addressed by the LEED Green Building Rating System. Pilot credits are refined through LEED project evaluations before they complete the balloting process for introduction into LEED. One point is awarded for each innovation up to a maximum of 5.</td>
<td>At least 1 principal participant of the project team shall be a LEED Accredited Professional (AP).</td>
<td>Adoptions were made to the following countries: United States, Argentina, Brazil, Chile, China, Colombia, Finland, Hong Kong, Macau, Mexico, Norway, Romania, Spain, Sweden, Turkey. For countries without predefined regional priority points there will automatically be awarded one of 4 points each, if you achieve the credits in the categories WEc1, WEc2, WEc3, EAc1, EAc3 or EAc5. Select a version, system, country and zip code to view the available regional priority credits: <a href="http://www.usgbc.org/rcp">www.usgbc.org/rcp</a></td>
</tr>
<tr>
<td>PATH 2:</td>
<td>Achieve exemplary performance in an existing prerequisite or credit that allows exemplary performance.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Contribution by Zumtobel</strong></td>
<td>Zumtobel products can contribute to meet the requirements for exemplary performance in EAc1 and EAc3. Zumtobel Lighting Solutions may contribute to innovative design schemes under the innovation credit path.</td>
<td>Zumtobel collaborates with LEED Accredited Professionals.</td>
<td>Zumtobel has production sites among others in USA, China and Sweden.</td>

<tr>
<td><strong>Intent</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To increase night sky access, improve night-time visibility, and reduce the consequences of development for wildlife and people.</td>
<td>To encourage the use of products and materials for which life-cycle information is available and that have environmental, economically, and socially preferable life-cycle impacts.</td>
<td>To increase the use of products and materials with life cycles and ingredients that improve overall environmental, economic and social performance.</td>
</tr>
<tr>
<td><strong>Requirements</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Meet one of two Options for Requirement 1 (Uplight) and Requirement 2 (Trespass) for New Construction, Core Shell, Schools, Retail and Healthcare projects.</td>
<td>Meet the requirements of ASHRAE 90.1 Section 9.5 or Section 9.6. They define minimum requirements for energy efficiency either for the complete building or for specific spaces. Additional: Achieve at least 4 out of a list of lighting quality criteria defined in the pilot credit library for at least 90% of the regularly occupied floor space. The design is carried out according to EN 12464, most of the criteria should be achieved by default.</td>
<td>OPTION 2: Multi-attribute optimisation Use products that comply with one of the criteria below 50% by cost of the total value of permanently installed products in the project. Products will be valued as below: - Third-party certified products that demonstrate impact reduction below industry average in at least 3 of the following categories are valued at 100% of their cost for credit achievement calculations - Global warming potential [CO2e] - Depletion of stratospheric ozone layer [kg CFC-11] - Acidification of land and water sources [moles H+] or [kg SO2] - Eutrophication [kg nitrogen] or [kg phosphates] - Formation of tropospheric ozone [kg NOx] or [kg ethene] - Depletion of non-renewable energy resources [MJ] - USGBC-approved program For further details see <a href="http://www.usgbc.org/node/2606895?return=/pilotcredits">www.usgbc.org/node/2606895?return=/pilotcredits</a></td>
</tr>
<tr>
<td>OPTION 4: Conduct a life-cycle assessment (LCA) of the project’s structure and enclosure that demonstrates a minimum of 10% reduction, compared with a reference building, in at least 3 of the 6 impact measures listed below. (1 must be global warming potential). - Global warming potential [CO2e] - Depletion of the stratospheric ozone layer [kg CFC-11] - Acidification of land and water sources [moles H+] or [kg SO2] - Eutrophication [kg nitrogen] or [kg phosphates] - Formation of tropospheric ozone [kg NOx] or [kg ethene] - Depletion of non-renewable energy resources [MJ]</td>
<td></td>
